ISUZU

Tender Intelligence as a Commercial Strategy

How ISZE, vehicle sales, and distributors can combine public procurement intelligence to grow genuine parts revenue and defend market share

Rev. 8 update, August 2026: new Section 2 cross-references the tender monitor's coverage against ISZE's actual FY27 network revenue per market. The finding is uncomfortable: the two markets carrying **57.5% of network revenue — UK and Israel — currently generate zero actionable opportunities**, while Romania (0.6% of revenue) generates 51. Four data sources are silently dark. Section 8 adds the fleet-size (vehicle count) question and what the notice data can and cannot support.

SECTION 1

Executive Summary

Public procurement represents one of the most transparent, predictable, and underutilised commercial channels available to Isuzu's European distribution network. Every year, hundreds of public authorities across Europe tender for light commercial vehicles, pickup trucks, and fleet maintenance contracts — the exact product categories where Isuzu competes.

This brief argues for a three-entity approach: Isuzu Motors Intl Europe (vehicle sales), ISZE (aftersales intelligence hub), and the local distributor (commercial executor) operating as a connected pipeline rather than three independent silos. The tender monitoring platform already built by ISZE is the connective tissue for that pipeline.

778	680	204	57.5%
notices processed, 24 Aug 2026 run (v6: 579)	scored opportunities live	Attack + Selective tier	of network revenue with **zero** actionable opportunities

The core problem is not product quality or price. It is visibility. Distributors do not know which public fleets in their territory contain Isuzu vehicles, who is maintaining them, and when those maintenance contracts are up for renewal. Tender intelligence solves the visibility problem.

Revision 8's central finding: the monitor works, but it is pointed at the wrong markets. NEW
Cross-referencing the live feed against the reviewed FY27 network budget shows coverage is close to *inversely* correlated with revenue. The UK (39.2% of network revenue) returns 125 notices and not one at action tier. Israel (18.3%) returns nothing at all — its data source has been failing silently on a parsing error. Romania, at 0.6% of network revenue, returns 51 actionable opportunities. Section 2 sets out the full picture and a revenue-weighted fix list.

> *"You should let me know when you have time what you think of it. We are the only OEM that doesn't collaborate on this with all parties (IMIE / ISZE / DB)."*
> — Jerome, forwarding v6 of this brief to Koen Matheussen, 20 Mar 2026

SECTION 2

Are We Watching Where the Money Is? NEW

A tender monitor is only as valuable as the match between where it looks and where the business actually earns. This section compares the live feed (24 Aug 2026 run) against ISZE's reviewed FY2027 network budget per distributor market. The two datasets have never been placed side by side before.

Market	FY27 BP rev.	Share	Notices	Action tier	Source status
United Kingdom	€13.04M	39.2%	125	**0**	Live (2 sources) — but nothing scores above Watch
Israel	€6.07M	18.3%	**0**	**0**	**Broken** — RSS parse error, silent since at least this run
Germany	€2.91M	8.8%	66	6	TED above-threshold only; DTVP national portal dark
Belgium	€2.30M	6.9%	14	2	National RSS returns 0 — TED above-threshold only
Portugal	€1.86M	5.6%	17	13	Healthy ratio
Norway	€1.76M	5.3%	14	2	Doffin dark — free API key never entered
Sweden	€1.46M	4.4%	16	1	TED only
Ireland	€1.27M	3.8%	9	2	TED only — holds 1 of the 2 Attack items
Greece	€0.57M	1.7%	13	5	TED only
Cyprus	€0.54M	1.6%	0	0	**No source configured**
Finland	€0.36M	1.1%	2	0	HILMA dark — free API key never entered
Hungary	€0.35M	1.1%	17	9	TED only
Malta	€0.23M	0.7%	0	0	**No source configured**
Romania	€0.20M	0.6%	**71**	**51**	Best-covered market in the feed
Denmark	€0.19M	0.6%	1	0	TED only
Iceland	€0.10M	0.3%	0	0	**No source configured**

Revenue: `01_data/91_build/bp_fy27_reviewed.json` (VP network budget per DB, reviewed 24 Apr 2026, €33.2M mapped). Tender counts: `01_data/14_dashboards/tender_data.json`, 24 Aug 2026 run. Israel = UTI (1799) + UMI (1797) combined. Shading: red = coverage gap against revenue, green = healthy.

Read the top two rows together. The UK and Israel carry **57.5% of the FY27 network budget between them and produce zero action-tier opportunities**. They are different failures: Israel is a broken pipe (no data arrives), the UK is a scoring problem (data arrives, nothing qualifies). Both are fixable, and neither is expensive.

SECTION 2, CONTINUED

Four Sources Are Dark

The weekly run reports these as ordinary lines rather than failures, so a reader skimming the output sees a successful run. Verbatim from `tender_monitor_log.txt`, 24 Aug 2026:

Source	Market value at stake	What the log says	Fix
Israel MR Gov	€6.07M (18.3%)	`[IL] Error: mismatched tag: line 53, column 2`	Feed is malformed XML. The existing sanitiser handles bad entities but not unclosed tags — needs a lenient parser fallback.
Doffin (Norway)	€1.76M (5.3%)	`[Doffin] No API key set — skipping.`	Register free key at docs.doffin.no, paste into scraper.
HILMA (Finland)	€0.36M (1.1%)	`[HILMA] No API key set — skipping.`	Register free key, paste into scraper.
Belgium national	€2.30M (6.9%)	`[BE] Total Belgium RSS: 0`	publicprocurement.be RSS returns nothing on current keywords — endpoint or filter needs revisiting.
DTVP (Germany)	€2.91M (8.8%)	`0 (national portals)`	Below-threshold German contracts still uncovered; portal needs browser-based access.

Also uncovered: Kazakhstan. KTK (Komtranskomplekt) carries **€1.14M** of FY27 budget and sits outside TED entirely, with no source configured. Four smaller accounts (MIDI, Grand Avto, CBC-Trans, KIMA — €0.88M combined) likewise have no country mapping in the budget file, so they cannot currently be matched to any tender feed at all.

SECTION 2, CONTINUED

Revenue-Weighted Fix List

Ordered by revenue exposure, not by engineering convenience. The first five items together cover 79% of the network budget and none of them require new software spend.

#	Action	Revenue covered	Effort
1	**Repair the Israel feed.** Largest single blind spot in the system: 18.3% of network revenue, zero notices. Parse error is one function in the scraper.	€6.07M	Low — hours
2	**Audit why the UK scores zero.** 125 notices, none above Watch, in the market with the richest parc data and the clearest genuine parts gap. Either the scoring model is mis-tuned for UK notice formats, or UK tenders genuinely do not fit — both answers are decision-useful, and we do not currently know which is true.	€13.04M	Low — manual review of ~10 notices
3	**Enter the two free API keys** (Doffin/Norway, HILMA/Finland). Registration only; no licence, no vendor.	€2.12M	Trivial
4	**Revisit the Belgium national feed.** Belgium is the fourth-largest market and currently sees only TED above-threshold notices — municipal and utility fleet work sits below that line.	€2.30M	Medium
5	**Close the German below-threshold gap (DTVP).** Carried as "in progress" since v6 in March; still zero.	€2.91M	Medium–high
6	Add Cyprus, Malta, Iceland — small individually, but currently invisible rather than merely thin.	€0.88M	Medium
7	Assess whether a Kazakhstan source exists and is worth wiring for KTK.	€1.14M	Unknown

The mirror-image question: is CEE over-served?

The CEE Lead region carries 246 of 680 opportunities (36%) and 120 of the 204 action-tier items (59%). Its constituent markets that appear in the FY27 budget — Romania (€0.20M) and Hungary (€0.35M) — total roughly 1.7% of network revenue. This is not an argument for switching CEE off: a genuine R&M framework win in Romania still converts to parts revenue, and low current revenue may be exactly what an under-developed market looks like before it grows. But it does mean the weekly review currently spends most of its attention on the smallest share of the book, and nobody has decided that on purpose.

Open question for the network, not for this document. Several high-volume tender markets — France (51 notices), Poland (51), Netherlands (46), Spain (45), Czechia (37), Italy (25) — carry no direct line in the FY27 budget file. They are presumably served through another entity or a parent distributor rather than being absent from Isuzu's footprint. Poland is the clearest case: Astara Poland trades as *Isuzu Benelux Spółka Akcyjna Oddział w Polsce*, which suggests its parts flow lands on the Belgium/IBX line rather than a Polish one. **That inference is drawn from the company name in correspondence, not from the budget file, and needs confirming** before anyone routes tender leads on the strength of it.

SECTION 3

The Integrated Commercial Approach

The current model is sequential and fragmented. Vehicle sales wins a fleet tender. Vehicles are delivered. The aftersales relationship either develops organically or — more often — it does not. ISZE has no visibility into which fleets have been won. The distributor sources parts from whoever is convenient. The connection between vehicle placement and parts revenue is left to chance.

Three actors, one pipeline

Actor	Role in the pipeline	What tender intelligence adds
Vehicle Sales dept.	Identifies and converts fleet vehicle purchase tenders. Delivers the vehicles.	Early sight of planning-stage tenders. Time to build buyer relationship before tender opens. New registrations fed back to ISZE immediately as UIO data.
Aftersales dept.	Parts supply hub. Pricing, SPA agreements, genuine parts strategy. Fleet intelligence owner.	Runs the tender monitor weekly. Qualifies leads. Routes to right distributor. Tracks which fleets are in the active parts pipeline.
Distributor (DB)	Local commercial executor. Services the fleet, wins the service contract, places parts orders with ISZE.	Receives a pre-qualified lead brief per opportunity. Clear action: approach the fleet buyer or the maintenance contract winner. No tender jargon — just who to call.

Live example, resolved — Astara Poland, 173-vehicle fleet tender NEW in v7

29 Jul	Astara Poland	Bidding a public fleet tender, 173 vehicles, for a customer that already runs Isuzu and is satisfied. Tender requires a 3-year R&M contract (provided via IAP through the dealer network) and conversion from alloy to steel wheels with new TPMS sensors. Astara requests a 35% SPA discount on 3 part numbers.
30 Jul	Koen Matheussen	While reviewing the request, asks Astara for Poland LCV parc size — the parc cross-reference this brief recommends, already happening informally.
18–21 Aug	Astara → Jerome	Astara pushes for a decision (dealers need the calculation by 20 Aug). Jerome approves the requested discount level on 21 Aug: *"please proceed with this requested price... for future tenders don't hesitate to contact us."*
status	Pending	SPA pricing granted; bid submission follows. Award outcome not yet known — the first candidate entry for the win/loss log in Section 7.

Source: Jerome/Koen ↔ Astara Poland (Łukasz Krzemiński) email thread, 29 Jul–21 Aug 2026, subject "Tender"/"RE: Tender". Note this opportunity reached ISZE **by email, not through the monitor** — consistent with Poland having no direct budget line and the lead arriving via the distributor relationship instead.

The parts revenue lifecycle

A single fleet tender win of 20 vehicles generates a parts revenue stream over the vehicle's 8–10 year operational life. Using a benchmark of £580 per vehicle per year, a fleet of 20 units represents approximately £116,000 in annual parts potential — or £928,000 over an 8-year lifecycle.

Fleet scenario	Units	Annual parts potential	8-year lifecycle value
Small public tender (e.g. municipal)	10	~£58,000	~£464,000
Medium fleet (police, utility)	30	~£174,000	~£1.4M
Large framework (national)	100+	~£580,000+	~£4.6M+

Based on UK distributor True Sales benchmark of £580/vehicle/year. Unchanged from v6 — no newer benchmark run this cycle.

SECTION 4

Where the R&M Motion Already Stands

The rest of this brief argues ISZE should build a systematic R&M motion. Two real, named workstreams already exist — one stalled, one live and scaling. Both are internal to ISZE / IMIE and were not reflected in this document before v7.

Workstream A — ITUK R&M incentive

Oct 2025	Internal	Break-even study completed; proposal from R&M administrator Real Garant discussed internally.
Nov 2025	Yoshimoto-san	Proposes an ITUK incentive support program, to be refined by ITUK.
Nov–Dec 2025	Jerome ↔ ITUK	ISZE pitches the R&M incentive including an operational kickback mechanism from ISZE to ITUK.
Mar 2026	Jerome	Chases ITUK at fiscal year end; ITUK confirms the proposal is still being worked internally, no committed timeline.

Status of this workstream is deliberately left open in this revision — excluded from the current scope of work.

ITUK's own R&M contract penetration — below target
ITUK's Sept 2025 KPI update: against a CY2025 registration plan of 1,310 units (≤3.5t) and 1,160 units (>3.5t), both at a 25% penetration target — actuals were **140 EWA/free-servicing contracts (30.67% penetration, above target)** but only **68 full R&M/Service Select contracts, 43 new + 25 extended (17.12% penetration, below the 25% target)**. This is UK R&M contract penetration specifically, not overall genuine parts capture, and the figure is nearly a year old.

Workstream B — Portugal / Astara ↔ Allianz Partners R&M & RSA (live, scaling)

Aug 2025	Filipe Paiva (Astara)	D-Max R&M contracts to be supplied by Allianz, but delayed — Allianz slow to finalise values, lacking Isuzu experience and cross-country comparisons.
Mar 2026	Jerome → Astara	Still chasing a status update on the CV (P700) R&M program.
7 Jul 2026	Bart Symons → Allianz	*"The cooperation with Isuzu Portugal is now starting... the interest in exploring a broader European rollout is now very concrete."*
22 Jul 2026	Allianz Partners	Confirms the live Portugal partnership for RSA and maintenance contracts with ISUZU/ASTARA Group; connects ISZE to Allianz Group Europe contacts for European-level rollout.

Portugal is the one market where coverage and commercial motion already line up. It returns 13 action-tier opportunities from just 17 notices — the healthiest ratio in the feed (Section 2) — and it is simultaneously the pilot market for the Allianz R&M partnership. If the tender monitor's R&M flag is ever going to route into a named commercial mechanism rather than a generic "approach the buyer" note, Portugal is where that can be proven first.

SECTION 5

R&M Contracts — the Highest-Value Category

Within public procurement there are two distinct tender types relevant to Isuzu's network: vehicle purchase tenders and Repair & Maintenance contracts. For ISZE and its distributors the R&M contract is by far the more commercially valuable of the two.

313
of 680 live opportunities flagged R&M (46%)

2
Attack-tier opportunities — both fleet R&M frameworks

9
action-tier items with a real, unexpired deadline

Advantage	Why it matters	Isuzu / DB implication
Predictable, recurring revenue	R&M contracts run 3–5 years. Parts demand is locked in for the duration.	ISZE can plan supply and SPA pricing with visibility.
Zero IAM leakage during contract	Once an authorised DB wins, parts are sourced through the authorised channel.	Genuine parts capture for the covered fleet rises to near-total during contract life.
Lock-in effect	Switching maintainers mid-contract is disruptive and contractually penalised.	A DB winning at year 1 is likely to win the renewal at year 4.
Fleet scale per contract	A single R&M tender covers every vehicle in the fleet, not just new units.	Highest leverage on existing UIO — no new vehicles need to be sold.
Renewal visibility	R&M contracts must be re-tendered on expiry; the monitor catches this pre-award.	Incumbent DBs can be warned before their own contract renews.

Every action-tier opportunity with a live deadline, all markets

Deadline	Days	Tier	Market	Buyer
25 Aug 2026	1	Selective	Germany	Stadtwerke Potsdam GmbH
26 Aug 2026	2	Selective	France	RTE Réseau de Transport d'Electricité
4 Sep 2026	11	Selective	Germany	Thüga AG
10 Sep 2026	17	Selective	Italy	TE.AM – Teramo Ambiente
13 Sep 2026	20	Selective	Sweden	Kiruna kommun
15 Sep 2026	22	**Attack**	Ireland	Horse Racing Ireland (HRI)
16 Sep 2026	23	**Attack**	Norway	Vestfold fylkeskommune
16 Sep 2026	23	Selective	Italy	A.AM.P.S. Azienda Ambientale
18 Sep 2026	25	Selective	Netherlands	Gemeente Almere

All nine are R&M-flagged. Every other action-tier item in the feed either has no captured deadline or has already expired — see the data-quality note below.

Two data-quality problems sit behind that short list. First, **589 of 778 notices (76%) carry no deadline at all**, so most of the pipeline cannot be triaged by urgency. Second, the queue does not expire: opportunities whose deadline has already passed are still presented at Selective tier — the Bulgarian Navy Command notice (39 days past), Banca Naţională a României (37 days), Italy A.R.E.S. 118 (21 days) and Romania ROMATSA (18 days) are all still sitting in the action list. A one-line rule routing past-deadline notices to Expired would clean this up.

SECTION 6

How Competitor OEMs Operate

Isuzu is not operating in a vacuum. Its primary competitors in the light commercial vehicle and pickup segment have made systematic fleet intelligence and proactive aftermarket engagement a core part of their commercial model. The gap is structural, not tactical.

Ford Pro — the blueprint

Ford's dedicated commercial vehicle division, created 2021, covering vehicles, service, financing and software under one umbrella for business and public-sector fleets.

- **€66 billion revenue, €6.8 billion EBIT (2024)** — a 10.3% margin, the most profitable commercial vehicle operation in the industry.
- **Target: 20% of EBIT from software and services by 2026.** Aftermarket parts, software and services already contribute 17% of Ford Pro EBIT.
- **Ford Pro Intelligence** analyses 1 billion vehicle data points daily — the fleet knows before the garage does when a service is due.
- **2,400 mobile service vehicles** in Europe; repair orders grew 70% in 2024.

Why tender win rate is the wrong metric

	Company A	Company B
Tender win rate	40%	25%
Genuine parts capture post-sale	Near zero	High — SPA terms agreed at delivery
Revenue per vehicle, 8-year lifecycle	Vehicle margin only	Vehicle margin + £4,600+ per unit
Conclusion	Looks better on a scorecard.	Generates 5–10× more commercial value.

Competitive positioning summary

OEM	Fleet intelligence approach	Isuzu gap
Ford Pro	Dedicated business unit, 1B data points/day, proactive tender targeting	No comparable intelligence operation
VWCV	Factory-embedded telematics; Connect Pro subscriptions €127M in 2024	No telematics connectivity in the ISZE model
Toyota	PDAD structural merger of vehicle and parts supply chains	ISZE operates as a pass-through
Mercedes Vans	Dedicated public fleet sales teams (DE, FR, UK)	ISZE relies on distributor initiative

Sources: Ford Q3 2024 earnings; VW Annual Report 2024; Toyota PDAD announcement. Unchanged from v6 — no fresher verified source pulled this cycle.

The Ford Pro model in one sentence: identify the fleet before it tenders, embed the data connection at delivery, and convert every service event into a genuine parts order — automatically. The tender is the entry point. The aftermarket is the business.

SECTION 7

The Real Cost of Doing Nothing

The default position — continuing without a structured tender intelligence function — is not a neutral choice. It is an active decision to cede ground to competitors and independent aftermarket operators.

Cost category	Estimated annual impact	Notes
Genuine parts revenue gap (UK)	€3.5M+	Internal gap analysis. Unchanged from v6 — no newer run this cycle.
Kosha shortfall vs. market growth (FY2031)	~€8.9M	Basis needs reconfirming — see note below.
GP margin compression (per Kosha plan)	−11pp by FY2028	GP% falls from 37.4% (FY2025 actual) to 26.1% (FY2028 Kosha).
Revenue with no tender visibility	**€19.1M of FY27 budget**	**UK + Israel combined produce zero action-tier opportunities today (Section 2).**

Note on the Kosha trajectory. The FY2026–FY2031 Kosha targets used in earlier revisions came from the IML Kosha study (Jan 2026). The FY2027 business plan waterfall (reviewed 30 Jun 2026) now gives verified figures for the near years: **FY2026 actual €32.94M** and **FY2027 plan €35.28M**. The FY2026 actual came in slightly *ahead* of the Kosha target of €32.3M. No restated FY2028–FY2031 curve exists in the workspace, so the long-range gap figure above is carried forward from the older study and should be treated as unconfirmed.

Closing the loop — intelligence from the field

Under EU Procurement Directive 2014/24/EU (Article 55) any unsuccessful bidder is entitled to request a debrief from the contracting authority — a right most of Isuzu's network never exercises.

Step	Action	What it produces
1. Tender lost	DB requests formal debrief within 15 days of award notification.	Evaluation scorecard.
2. DB reports to ISZE	One-form submission: lost on price / spec / network / capacity / other.	Loss reason database.
3. ISZE analyses patterns	If 70%+ of losses are on price for a class: SPA pricing review.	Actionable pricing and SPA insight.
4. R&M award follow-up	DB identifies the R&M winner and contacts them as authorised parts supplier.	Parts revenue from won-by-others contracts.

The Astara Poland case is this loop starting on its own. Nobody built the Step 2 form, and the deal came in anyway — a DB, mid-bid, asking ISZE directly for the R&M-linked pricing lever it needed. Capture the pricing granted (21 Aug) and the eventual award outcome as the first real entry.

SECTION 8

Recommendations

Sequenced by effort and time to impact. Everything in the immediate block is executable within the current ISZE resource base with no additional budget.

Immediate (0–4 weeks)

- **Repair the Israel feed.** The single largest blind spot: 18.3% of network revenue, currently zero notices, failing on a parse error.
- **Enter the two free API keys** (Doffin/Norway, HILMA/Finland) — registration only, covers a further €2.12M of budget.
- **Assign an owner to the two Attack-tier opportunities** before their mid-September deadlines (Ireland/HRI 15 Sep, Norway/Vestfold 16 Sep), and check the two items closing within 48 hours (Potsdam 25 Aug, RTE 26 Aug).
- **Expire past-deadline notices** so the action queue stops presenting dead opportunities.
- Formalise the weekly tender monitor run as an ISZE operational activity with one named owner.

Short term (1–3 months)

- **Audit the UK zero.** 125 notices, nothing above Watch, in the market with 39.2% of network revenue. Manually review ten UK notices and determine whether this is a scoring defect or a genuine fit gap.
- **Revisit the Belgium national feed** and close the German below-threshold (DTVP) gap — together €5.2M of budget currently seen only above TED threshold.
- Confirm which entity carries Poland, France, Netherlands, Spain, Czechia and Italy in the budget, so tender leads in those markets can be routed to a real owner.
- Run the tender monitor output against parc data where it exists, and flag buyers already operating Isuzu vehicles as high-priority.

Medium term (3–12 months)

- **Decide the CEE question deliberately:** the region absorbs 59% of action-tier attention for roughly 1.7% of mapped network revenue. Either that is a growth bet worth making explicitly, or attention should be rebalanced towards the larger markets.
- Prove the R&M routing in Portugal, where healthy tender coverage and the live Allianz partnership already coincide.
- Add Cyprus, Malta and Iceland; assess whether a usable Kazakhstan source exists for KTK.
- Pursue national framework qualification (UK RM6228, UGAP in France, the Dutch central framework) — the highest-leverage way to remove the price objection entirely, requiring an IMIE lead and a 12–24 month horizon.

SECTION 9

Appendix — About the ISZE Tender Monitor

A Python platform that scrapes public procurement portals weekly, classifies each notice against ISZE's CPV target list, scores it on three dimensions (Fit, Win, Econ) and generates a distributor-ready lead brief. No software licence, no vendor, roughly four hours of staff time per week.

Source	Coverage	Status, 24 Aug 2026 run
TED (EU Official Journal)	27 EU member states, above-threshold	Live — 605 notices
Contracts Finder (UK)	UK lower-value (councils, NHS, police)	Live — 121 notices
Find a Tender (UK)	UK above-threshold	Live — 22 notices
TenderNed (Netherlands)	Dutch national	Live — 25 notices
Israel MR Gov	Israeli public procurement (RSS)	**Failing** — XML parse error
Belgium national RSS	Belgian public procurement	**Returns 0**
Doffin (Norway)	Norwegian public procurement	**Skipped** — free API key not set
HILMA (Finland)	Finnish public procurement	**Skipped** — free API key not set
DTVP (Germany)	German below-threshold	**0** — needs browser access

On vehicle counts (fleet size) NEW

A recurring request is to show how many vehicles each tender covers. The honest position is that this data mostly does not exist in the notice metadata.

Measure	Result	Comment
Notices with a fleet size populated today	1 of 778	Existing extractor is English-language and title-only
Recoverable with a multilingual extractor	~22 of 778	2.8% — tested across 16 languages, ~95% precision on manual review
Notices carrying any description text at all	168 of 778	22% — the ceiling on any text-based extraction

The reason is structural: vehicle counts normally live in the tender documents attached to a notice, not in the notice itself. Improving the extractor is cheap and worth doing — it turns 1 usable figure into roughly 22, including an 83-vehicle Romanian postal fleet and a 20-vehicle Stuttgart municipal order — but it will never populate the column for most rows. **For the few opportunities that reach Attack or Selective tier with a live deadline (currently nine), reading the tender document directly is the reliable way to establish fleet size** — at that volume, entirely practical.

Offline behaviour

The dashboard is fully self-contained: every external URL in the file is an outbound link to a source notice, and no stylesheet, font or script loads from the internet, so it renders without a connection. Two caveats: the page reads its data from a sibling JSON file, which some browser configurations block when opened directly from disk rather than served; and the weekly refresh requires connectivity to reach the portals.
