FOLDER INDEX

Universe

What is in this folder, which document to open, and where the sources and the builds sit.

WHAT THIS EDITION SETTLES

Seven current editions, and what each one is for.

The launcher to double-click for each of them.

Where the markdown sources and the build scripts live.

The two withdrawn papers, kept on disk and not to be quoted.

Isuzu Universe — folder index

Internal · 23 September 2026 · what is in this folder, which document to open, and where the sources and the build scripts sit.

What this folder is

`Isuzu Universe\` holds one programme, written up in more than one way. It is not a set of competing plans: it is a single commercial idea, put in front of different readers, plus the working software and the evidence behind it.

The idea is that ISZE should give its distributors and dealers tools worth using - a parts classification, a dealer self-assessment, market and fleet context, a defence for jobs that are being lost to competitors, and an early view of tenders - and in return earn the information that makes those tools better. The papers argue that case. The annex carries the design detail. The deck is for talking from. The showcase is the working screen.

Why there are several papers rather than one:

- **The white paper** is the five-pillar evidence case: AIM, IDS, PRISM, DLOD and Tenders, each with its own worked example on real measured numbers. It is the long read and it is printed on charcoal throughout, because it is a different kind of document.
- **Universe 3.0** is the shorter commercial paper: the scope boundary, the five-tool portfolio, the money chapter, the participation assessment and the decision it asks for.
- **The annex** exists so that nothing was lost when the 80-page edition was withdrawn. The tender framework, the IDS chapter in full and the reference rules live there.
- **The Yellow Paper** is the operating paper underneath all of it: how the product is built, what surfaces a finding, how it is priced, and the stop condition.
- **The deck and the showcase** are the same argument in two other forms. The deck is for a room; the showcase is the screen a distributor would actually see.

The current editions are the ones dated 23 September 2026, plus the Yellow Paper v0.5 of 22 September. Two earlier papers are withdrawn and stay on disk for reference only: they are named in the footnotes at the end of this index.

What is in this index

Every part of this index, and the one thing it settles.

Part	Pages	What it settles
What this folder is	00-00	The programme in one page, and why there are several papers.
Read these first	00-00	The current editions, with page counts, and the receipt beside each.
The launchers beside them	00-00	One double-clickable launcher per deliverable.
Where the sources live	00-00	The markdown each document is built from, in 01_Strategy.
The GPT handover pack	00-00	The review pack that goes back to the other tool.
Build and verification	00-00	Which build folder builds what, and the checks each carries.
Footnotes	00-00	The picture folders, the kept-aside showcase, and the withdrawn papers.
The rest of the folder	00-00	The working programme, one line per folder.

Read these first

These are the current editions. Every one of them sits at the root of `Isuzu Universe\`.

File	Pages	What it is
`INDEX.md`	markdown	The folder map: the two programmes in this folder, the software component, and what is and is not under version control. Read this first, in an editor.
`ISUZU_UNIVERSE_WHITE_PAPER_2026-09-23.pdf`	64	The five-pillar paper: AIM, IDS, PRISM, DLOD and Tenders, each with a worked example on measured numbers. Charcoal field throughout. Fourteen chapters, with a contents, a figure list and a table list at the front.
`ISUZU_UNIVERSE_3_0_2026-09-23.pdf`	29	The commercial vision and participation paper. The scope boundary, the five-tool portfolio, the economics and what the investment must earn, the participation score per step, and the decision. Carries the chapter schedule.
`ISUZU_UNIVERSE_3_0_ANNEX_2026-09-23.pdf`	15	The design annex, in three parts: the tender and headquarters-support framework, the IDS Development Studio in full, and the reference rules (measures, periods, identities, record structures).
`ISUZU_UNIVERSE_3_0_DECK_2026-09-23.pptx`	24 slides	The talk deck. One idea per slide, the argument in the speaker notes; a note is written on every one of the 24 slides. Uses the same charts as the paper so the two cannot disagree.
`ISUZU_UNIVERSE_3_0_SHOWCASE.html`	web page	The working showcase, rebuilt to match the paper: it carries the current section list and points each tool at the section that answers its question. A dated copy sits beside it as `ISUZU_UNIVERSE_3_0_SHOWCASE_2026-09-23.html`, and that is the one the launcher opens.
`Universe_Yellow_Paper_v0.5_2026-09-22.pdf`	23	The product and operating paper. A worked commercial case, the written rule for what surfaces an opportunity, the pricing arithmetic, the pilots, a go/no-go test and the stop condition.

Each of these has a receipt or a verification record beside it: a `SHIP_RECEIPT.json` for the vision paper, the annex, the deck, the showcase and the Yellow Paper, and a `.VERIFICATION.md` for the white paper. They record what was checked after the build, not before it.

The launchers beside them

One launcher per deliverable, at the root, beside the file it opens. Double-click the `.cmd`.

Launcher	Opens
`OPEN_ISUZU_UNIVERSE_WHITE_PAPER.cmd`	The 64-page white paper PDF
`OPEN_ISUZU_UNIVERSE_3_0.cmd`	The 29-page vision paper PDF
`OPEN_ISUZU_UNIVERSE_3_0_ANNEX.cmd`	The 15-page annex PDF
`OPEN_ISUZU_UNIVERSE_3_0_DECK.cmd`	The 24-slide talk deck
`OPEN_ISUZU_UNIVERSE_3_0_SHOWCASE.cmd`	The working showcase, in a browser
`OPEN_Universe_Yellow_Paper_v0.5.cmd`	The 23-page Yellow Paper PDF
`OPEN_UNIVERSE_FOLDER_INDEX.cmd`	This index

Where the sources live

The markdown that each document is built from, and the working files behind it, are all in `01_Strategy\`.

File	What it is
`ISUZU_UNIVERSE_WHITE_PAPER_2026-09-23.md`	The source of the 64-page white paper.
`ISUZU_UNIVERSE_3_0_2026-09-23.md`	The source of the 29-page vision paper.
`ISUZU_UNIVERSE_3_0_ANNEX_2026-09-23.md`	The source of the 15-page annex.
`Universe_Yellow_Paper_v0.5_2026-09-22.md`	The source of the Yellow Paper.
`DLOD_NETWORK_ROLLOUT_2026-09-23.md`	A costed design for running DLOD across the ISZE network, and the evidence findings behind it. An internal note for the business owner.
`UNIVERSE_WHITE_PAPER_KILLER_MEGAPROMPT_2026-09-23.md`	The brief the white paper was written from: the five pillars, the figures wanted, and the audience.
`WHITE_PAPER_WORKING_2026-09-23.md`	The working file kept while the white paper was written: reconnaissance, the merge ledger, the pillar map and the figure plan.
`Work_Efficiency_Audit_2026-09-23.md`	The efficiency measurement of this folder: how much of what was written on 21 and 22 September is still in the current documents.

The GPT handover pack

`GPT_HANDOVER_2026-09-23\` is the review pack that goes back to the other tool, in charcoal and Isuzu red - the palette it recognises as its own. It reviews the two withdrawn papers of 22 September, finding by finding.

File	What it is
`00_START_HERE.md`	The note to paste into the chat before the critique: what the pack is, and what is in it.
`UNIVERSE_3_0_CRITIQUE_2026-09-23.md`	The critique itself, in markdown.
`UNIVERSE_3_0_CRITIQUE_2026-09-23.pdf`	The same critique rendered, 8 pages, charcoal and red.
`OPEN_UNIVERSE_3_0_CRITIQUE.cmd`	Opens the rendered critique.
`UNIVERSE_3_0_CRITIQUE_2026-09-23.SHIP_RECEIPT.json`	The receipt for the rendered pack.

Build and verification

Nothing in this folder is edited by hand at the last step. Each document is rendered from its markdown by a script, and each build folder carries its own checks.

Folder	What it builds	Main scripts	Checks
`_build_30\`	The vision paper, the annex, the talk deck, the showcase and the critique pack	`build.py`, `build_annex.py`, `build_deck.py`, `patch_showcase.py`, `build_critique.py`, `figures.py`	`check_coverage.py`, `layoutqa.py`, `receipts.py`, `_check_critique_facts*.py`
`_build_white\`	The 64-page white paper	`build_white.py`, `figures_white.py`	`check_white_paper.py`
`_build_v05\`	The Yellow Paper v0.5	`build_v05.py`	`check_coverage.py`, `magic_sweep.py`

Three scripts do the work that keeps the documents honest. `figures.py` and `figures_white.py` regenerate every chart from named source files, so a paper cannot carry a chart that disagrees with its source. `check_coverage.py` proves that each correction from a review actually landed, and sweeps for language that should not appear. `layoutqa.py` measures the rendered PDF for the layout faults a reader would notice: a heading stranded at the foot of a page, a chart parted from its caption, a table split from the sentence that introduces it.

`_build_30\docbuild.py` is the shared renderer that puts a markdown file into the house style and adds the running header, the footer and the bookmarks. All three paper builds pass through it.

Footnotes

The picture folders. `_qa_page\`, `_qa_pdf\`, `_qa_white\`, `_qa_yellow\` and `_qa_logo\` at this level, and `_build_30\_qa\`, `_build_30\_qa_annex\` and `_build_30\_qa_critique\` inside the vision build, hold the page images taken during the visual checks. They are working evidence: safe to delete when no longer needed.

The old showcase. `ISUZU_UNIVERSE_3_0_SHOWCASE_SUPERSEDED_2026-09-22.html` is kept deliberately. It is the previous showcase, and it still carries the withdrawn 80-page paper inside it, so it is the only place that older edition survives in a form that can be opened.

The withdrawn papers. `ISUZU_UNIVERSE_COMMERCIAL_VISION_3_0.pdf` (80 pages) and `ISUZU_UNIVERSE_COMMERCIAL_TOOLS_WHITE_PAPER.pdf` (33 pages) are the two editions of 22 September. Both are superseded by Universe 3.0 and must not be quoted as current. The first omitted the scope boundary; the second stated it but offered a different portfolio. What the review cut from the first, and still worth keeping, now sits in the annex.

The probe scripts. The build folders have collected a large number of very short scripts that each answer one question about the layout - `_probe_keep.py`, `_probe_tails.py` and the like. `_build_30\` alone holds eighteen files whose name begins `_probe`; `_build_v05\` holds fourteen and `_build_white\` five. They are harmless, and they were each written to settle one question on one day, but they make those folders harder to read than the work in them deserves. They can be deleted when someone has a quiet hour.

The rest of the folder

Beyond the papers and their builds, the folder carries the working programme. One line each; the full map is in `INDEX.md`.

Folder	What is in it
`05_AIM_Universe\`	The maintained pricing-decision component, and the only part of this folder under version control. Its own `README.md`, `docs\` and `progress\progress.json` say what is verified and what is not.
`01_Strategy\`	The strategy sources: the papers above, the critique of them, the commercial and value-exchange drafts, and the pilot evidence pack.
`_MERGED_MASTER_2026-09-21\`	The merged master map. Open `00_THE_MAP.md` inside it.
`_STRATEGY\`	The orchestration evidence behind that map: returns, workstreams, and the Cordwallis case.
`02_Atlas\`	The network and parts atlas, with its concept notes and shortcuts.
`03_Packages\`	The Cursor packages R0 and R1, and their zip drops.
`04_IDS_AIM_and_IMOTORS\`	The IDS-to-AIM bridge, the IMOTORS pack, and the ITUK real-data page.
`06_Working\`	Build scripts, export packs and PRISM screen grabs.
`GPT_HANDOVER_2026-09-22\`	The earlier handover pack to the other tool, superseded by the 23 September pack.
`Universe_IDS_AIM_Cursor_Handoff\`	The handoff bundle to the other build tool, plus its zip at this level.
