MODE B · JEROME ONLY

MH × GPS
Contradictions visual brief

Strategy is coherent. Method is not. The ship-blocker is which euro/pound sits in the GPS numerator and denominator — sales-to-dealer (S2D), ISZE→DB billing (ASC), or a hybrid — and that basis has flipped enough times to break DB packs.

Prepared 30 July 2026

Masumi Hayakawa communications · Outlook + workspace anchors

01 · Impacted figures at a glance

Numbers that move when the GPS basis moves — or that are already locked and must stay labelled.

IUK GPS · ASC LENS

02 · Risk ranking

Severity of each contradiction for distributor conversations before end-August.

#	CONTRADICTION	SEVERITY	WHAT BREAKS
C1	S2D vs ASC vs hybrid GPS basis	HIGH	IUK >100%; incomparable DB packs
C2	Equal 1% stretch vs kickback tiers	HIGH	MD story vs Duncan story
C3	Impose stretch vs ask DB first	HIGH	Negotiation ownership
C4	£508k / €376k locked · PMS XXX	MED-HI	Aug Japan SPA / MD pack
C8	Incentive purchase vs retail	HIGH*	*mail thin this pass
C7	PMS pilot vs GPS growth lever	MED-HI	Scope / owner overload
C5	F9 / attrition / IX 76%	MED	Target Study credibility
C6	Price ladder stacks differ	MED	+5%/+3% vs deck ×1.05×1.018

03 · Three layers — stop mixing them

Same word “GPS”. Three products. Mixing Layer A numerator with Layer B denominator is what pushes IUK over 100%.

LAYER A

Sales to dealer

KPI S2D · Target Study £/UIO · DB→dealer commercial target. Downstream market activity.

LAYER B

ISZE → DB billing

ASC / SAP net · planning GPS% · kickback wallet €. Stock moves can inflate.

LAYER C

Ambition overlay

Stretch £/% · PMS slice · SPA · price ladder · IX waterfall. Not a data basis.

> **Two-column rule before any DB pack leaves:** column 1 = GPS% (Layer B) · column 2 = S2D commercial target (Layer A). Never one blended percentage.

Source: Jerome → Masumi, 16 Jul 2026 — “sales to dealer data of the KPI file” testcase; IUK from around 50% to over 100%.

04 · ITUK stretch — two currencies, one ambition

Masumi already separates the layers correctly on 23 Jul. PMS sub-amount is still blank.

DEALER-LAYER STRETCH

£ 508,758

~1% share · Target Study green · Duncan OK in principle if F9 fixed

ISZE-LAYER STRETCH

€ 376,074

ISZE sales impact for ITUK · not the same object as the £ figure

Do not add the £508k share stretch to the N75 PMS category gap (~€0.65M oil cover lens). Complementary stories — different denominators.

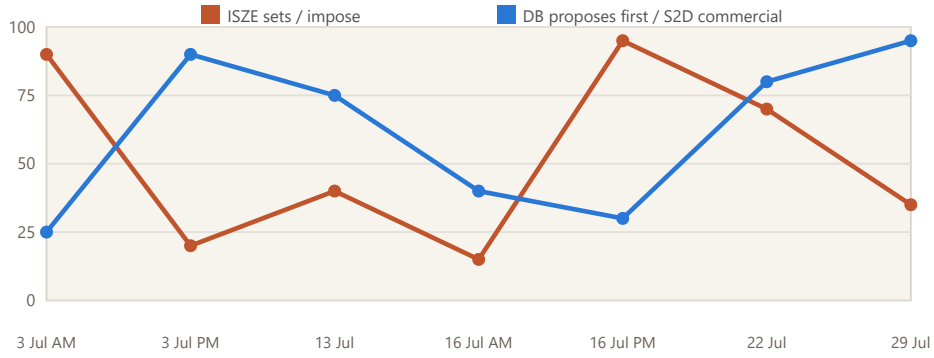

05 · Portugal & network — same “GPS”, different maths

Portugal: flat €/UIO vs segmented wallet (N35/N75/F). Network: MIDI theoretical wallet removed from denominator.

06 · Stance flips on the calendar

Apr 2026	**Target Study** — UIO × £/unit × share. Duncan: F9 wrong, attrition open, stretch OK in principle, IX 76% ambitious.
3 Jul AM	**Equal 1%** for all DBs · kickback draft · "set up DB sales targets".
3 Jul PM	**Rephrase:** ask each distributor for *their* target first — then schedule.
~13 Jul	**S2D ask** — GPS based on KPI sales-to-dealer (per Jerome's 16 Jul mail).
16 Jul AM	**Jerome break:** IUK >100% · prefer "last week's" ASC working method.
16 Jul PM	**MH tab:** +5% / +3% · stretch to *impose* · end August — basis not locked in writing.
22–23 Jul	**Still S2D targets** from KPI · Aug PMS · £508k / €376k · PMS XXX.
29–30 Jul	**DB decks lock:** customer headline = S2D FY27 · ASC GPS% internal.

07 · 2025 S2D pushback hunt

> **Not found in accessible mail.** No written record located where you proposed GPS on an S2D basis in *2025* and someone got angry — neither F2F minutes nor email.

- Outlook Inbox: **0** pre-2026 subjects matching GPS / sales-to-dealer / Genuine Parts Share.
- Hayakawa Restrict: **51** inbox mails, all from **2026** in this mailbox view — no 2024–2025 MH GPS hits in walked folders.
- Sent Items via COM: only **~6** items total (Sent cache essentially empty) — cannot reconstruct your 2025 outbound from this store.
- Workspace memory / FACTS / digests: no "angry / refused / F2F blow-up" narrative on 2025 S2D GPS.

> **Closest written evidence is July 2026, not 2025:** you warned Masumi that S2D GPS breaks (IUK >100%) and said last week's method was safer. She did not "get angry" in writing — she advanced price ladder + impose stretch without resolving the basis. If the 2025 incident was F2F with a male manager (or misdated), it is not in this mailbox extract.

Next dig: Teams chat, OneNote, Online Archive / PST, or 2025 GPS/KPI calendar notes.

08 · Lock list before end-August

1 · BASIS

Two columns

GPS% = Layer B · S2D target = Layer A

2 · ITUK

£508k / €376k

Fill PMS XXX before Japan day

3 · STRETCH POLICY

Pick one

Flat 1% share *or* kickback tiers — not both

4 · NEGOTIATION

DB → ISZE

Proposal → validate → record delta · then "impose"

Bronnen: Masumi Outlook threads Jul 2026 · Duncan Target Study Apr 2026 · GPS planning lineage · DB sales-review S2D lock · Portugal 63.3% meeting figure. Mode B — not for distributor forward.
