Goal of Isuzu's Parts Sales

Environmental awareness / Background and Objectives

- UIO of Isuzu vehicle in the world is more than 6 million, far exceeding the 1.3 million in Japan.
- A large number of vehicle will be needed by 2050 to support rising living standards, especially in emerging economies.
- With increasing UIO, we need a system to supply parts to all markets in a timely manner in order to maintain the Isuzu vehicles' conditions and to ensure their 100% performance.
- We have to properly manage DB/DLR's various information that is required for **"Moving the World – for you"**

Vision

- Standardization of functions and mechanisms to maintain the same level of availability as in Japan
- Provide answer to societal challenges and customer's concern
  - ➢ Reduction of CO2 emissions,TCO and Waste

Value

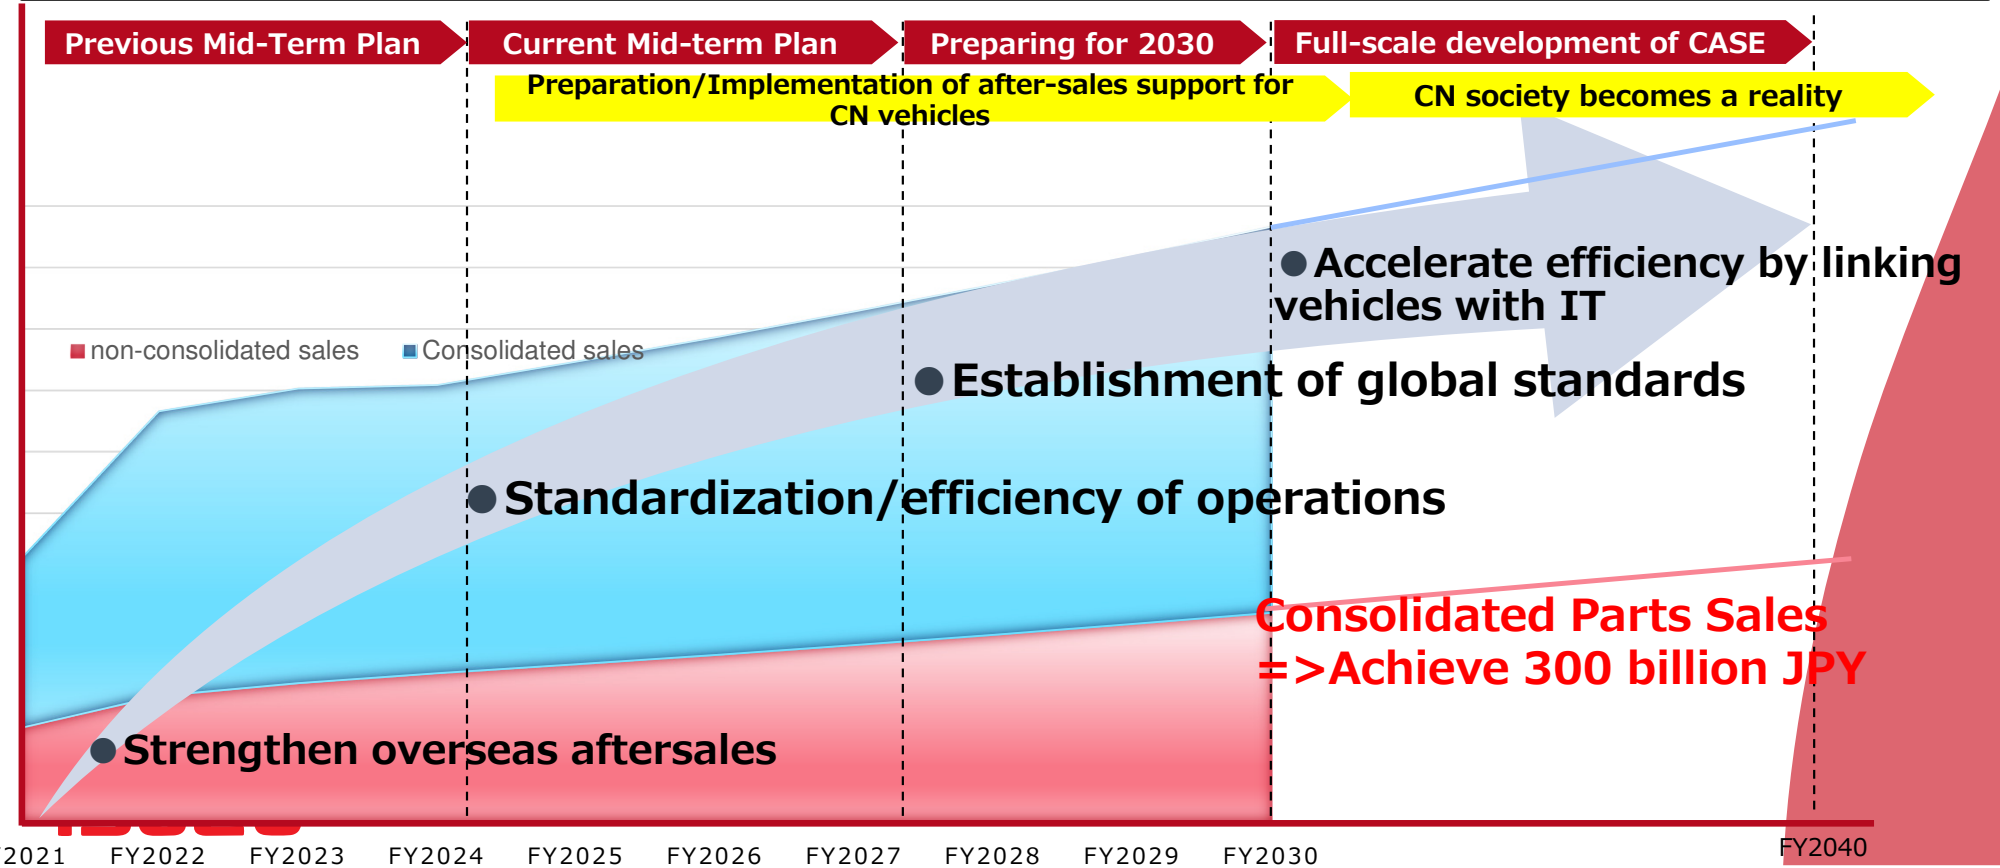

- No. 1 in parts supply rate
- Maximization of revenue : 40% GP or higher
- Achievement of No. 1 in global environmental friendliness
- Achievement of No. 1 in CS and increase the brand value

Mission

- To support the operation/transportation of Isuzu vehicles by establishing a system that can deliver parts necessary for our customers' vehicle maintenance, when they are needed, in the quantity needed, and at a reasonable price.
- To manage and support the parts business of all companies and achieve parts revenue targets.
- To raise ISUZU brand value to be chosen by customers through collaborative initiatives among vehicle sales, services and parts to provide service products for TCO reduction and profitable services to customers.
- To build a business operation that takes the environmental issues into consideration by establishing an efficient parts distribution system.

Mid & Long-term Plan (Vision)

- Strengthening information linkage with overseas markets, standardizing KPIs, and building a system that enables rapid decision-making.
- Establish **a scheme to obtain information equivalent to that in Japan** in order to realize common business operations, standardization, efficiency, and structuring in each market area.

Challenges in Mid-Term Plan

Policy

■ **Create Isuzu's unique added value in aftersales and build a brand that wins the trust of customers.**

Tackling each issue in view of CASE technologies proliferation which will be in full swing from 2030 onward.

- Deployment of Isuzu standards (business model and KPI)
- Maximize existing business
- Initiatives with an awareness of solving social and customer issues

Key Challenges

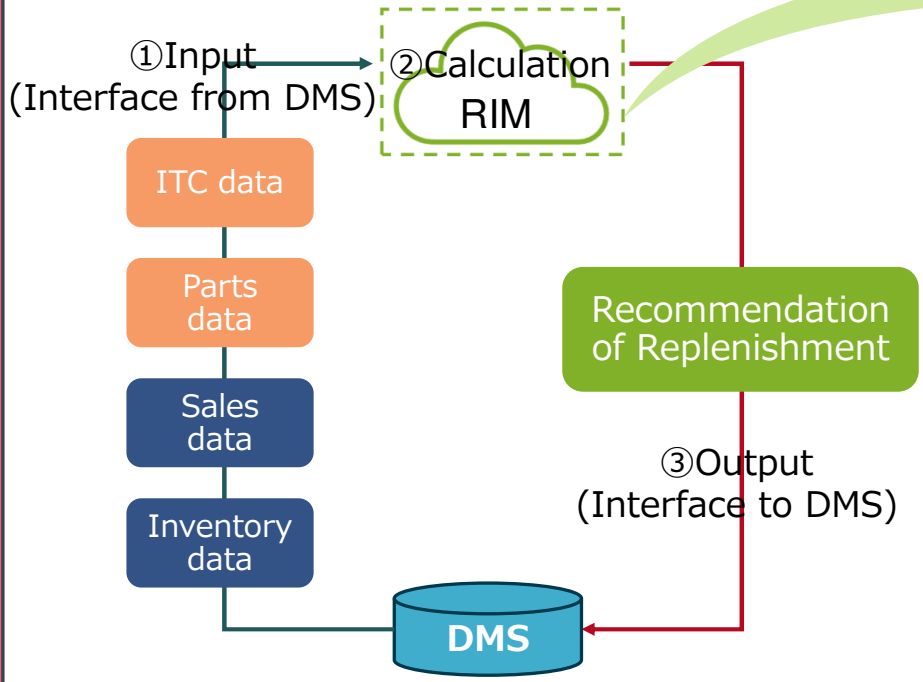

Structural reinforcement for uptime support	Visualization of lost sales by setting and managing KPI and realization of systematic business management in line with the actual status
	Thorough use of parts that meet Isuzu quality standards
Environmental consideration	Develop vehicle reconditioning business/reduce replacement cost of new vehicles (EV)/increase parts sales
	Improvement of container filling rate (M3) to reduce logistics waste/CO2
Continuous improvement of operation process	Proposal to provide a demand forecasting system to DLR
	System improvement to improve efficiency in handling various inquiries and to reduce workload
Sales target	Parts business management and support to each market to achieve parts revenue targets
CASE initiative	Establish a customer and vehicle information management system and create a distribution system to support battery replacement business

ISUZU

Consideration of providing a demand forecasting system to DLR

- Strengthen the system to maintain customer operation through proper inventory operations at DLR.
- For DLR that have not implemented RIM or are aware of inventory management problems, IML would like to discuss with DB to introduce IML recommended system as necessary.
- For DB that already use DMS/RIM for data management, we would like to ask them to provide demand and inventory information to ISZE.

Ordering Process

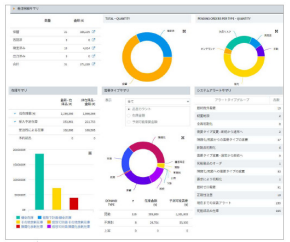

Operation in RIM

1. Selection of items to be stocked based on demand and price of parts
2. Setting the target of Fill Rate for each frequency category.
3. Classification and forecasting of demand based on vehicle status (age of use)

Recommended List

Dashboard (visualization)

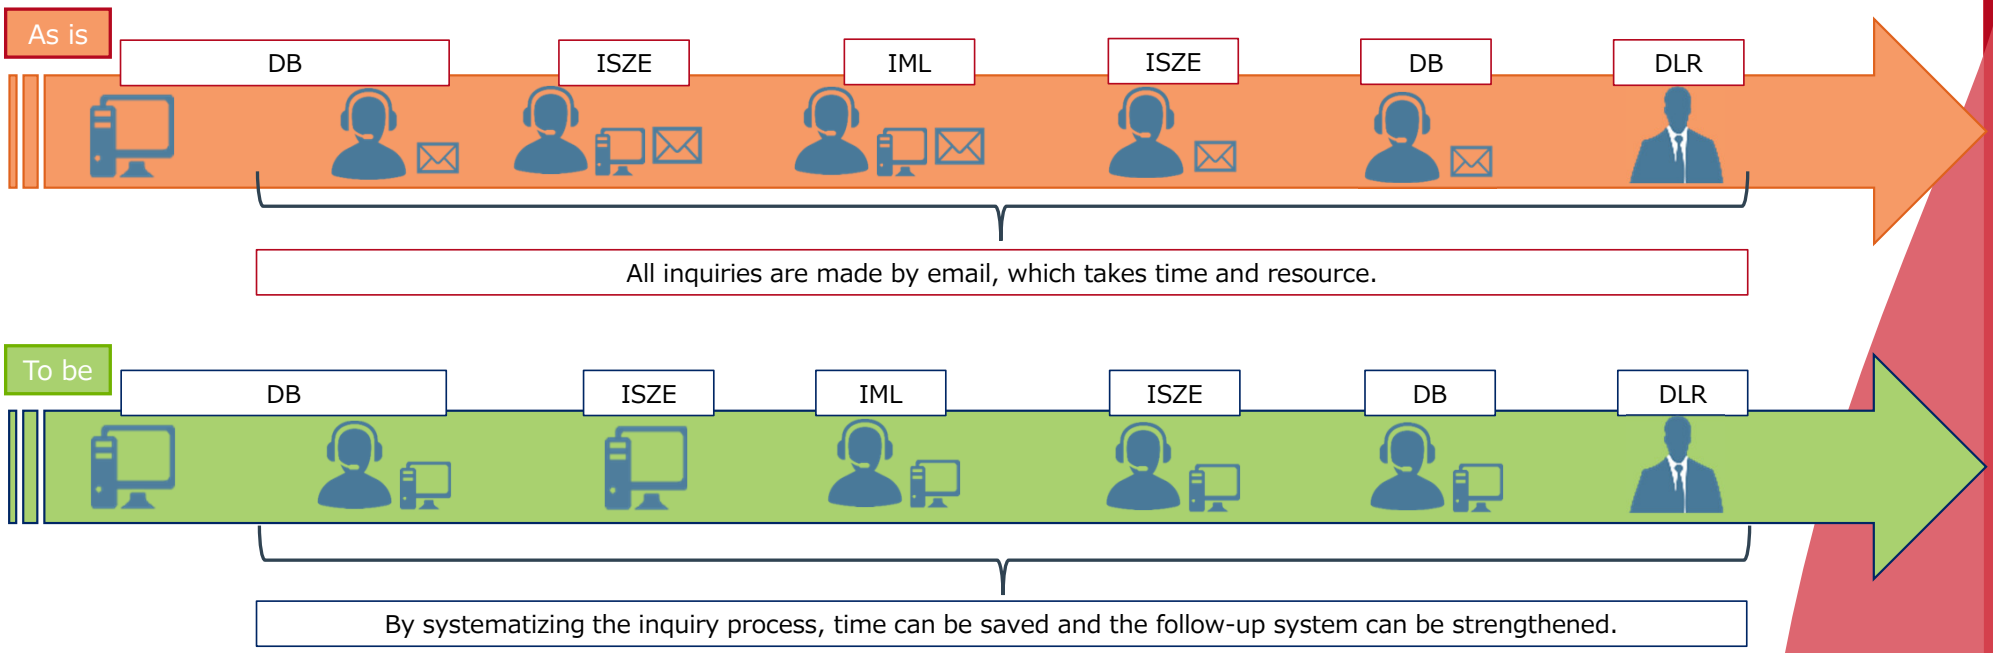

System improvement for various inquiry

Enhancement of BO follow-up system through system linkage of IML-ISZE-DB

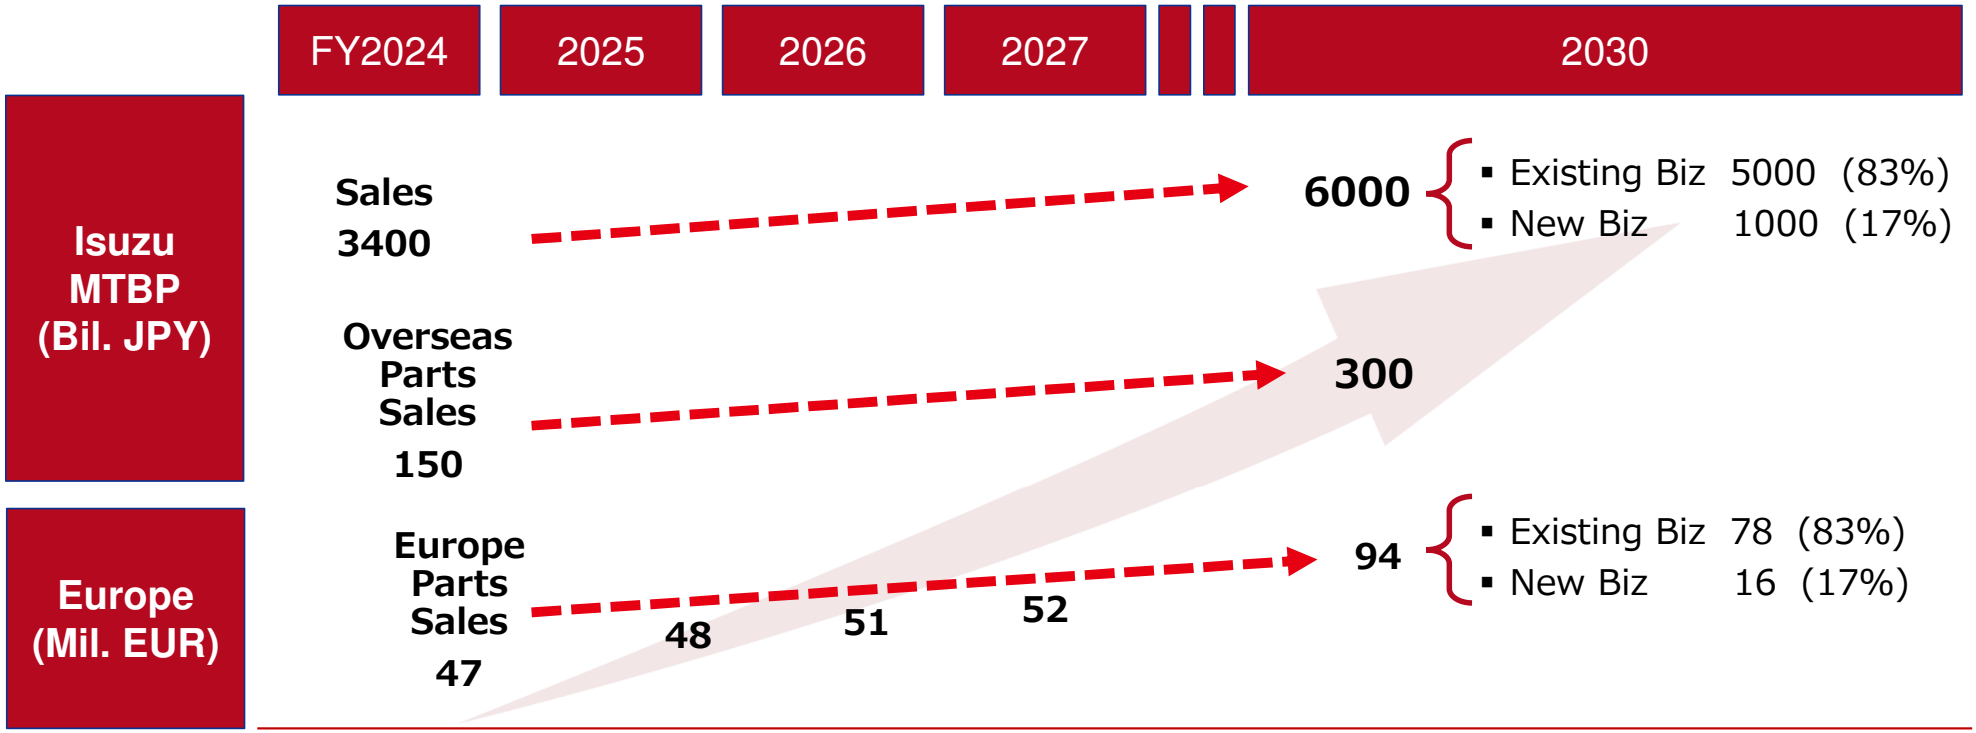

There was no system linkage between IML-ISZE-DB, and all delivery date inquiries were made by E-mail.

The systems will be linked to reduce wasted time and errors caused by manual operations and to strengthen the BO follow-up system.

- ✓ DB and ISZE will be considered by ISZE.
- ✓ System integration between ISZE and IML will be considered by IML.
- ✓ Translation between each country's language and Japanese is done by the system.

Target: Vision for 2030

Objective & Challenge

- ☐ Improve business foundation till FY27 while adjusting the growth curve towards 2030.
- ☐ Execute new business initiatives in order to achieve the above objectives.

ISUZU

ISZE's Mid Term Business Plan (MTBP)

- Contribute to earnings by increasing the share of genuine parts sales
- Support customer retention through parts sales linked to service products (R&M program)
- Innovation: Collected market intelligence will be shared with IML to identify what we can do in this area of future challenges and take actions

ISUZU

ISZE's Mid Term Business Plan (MTBP)

- **Increase Distributor genuine parts share**

In cooperation with IMG, ISZE will support Distributors (DB) re. genuine parts share increase

- DB KPI's:
  - ✓ Fill rate
  - ✓ DLR sales
  - ✓ Inventory (M.O.S)

- DB's to set a target for each KPI
- DB's to share the KPI data with ISZE/IMG

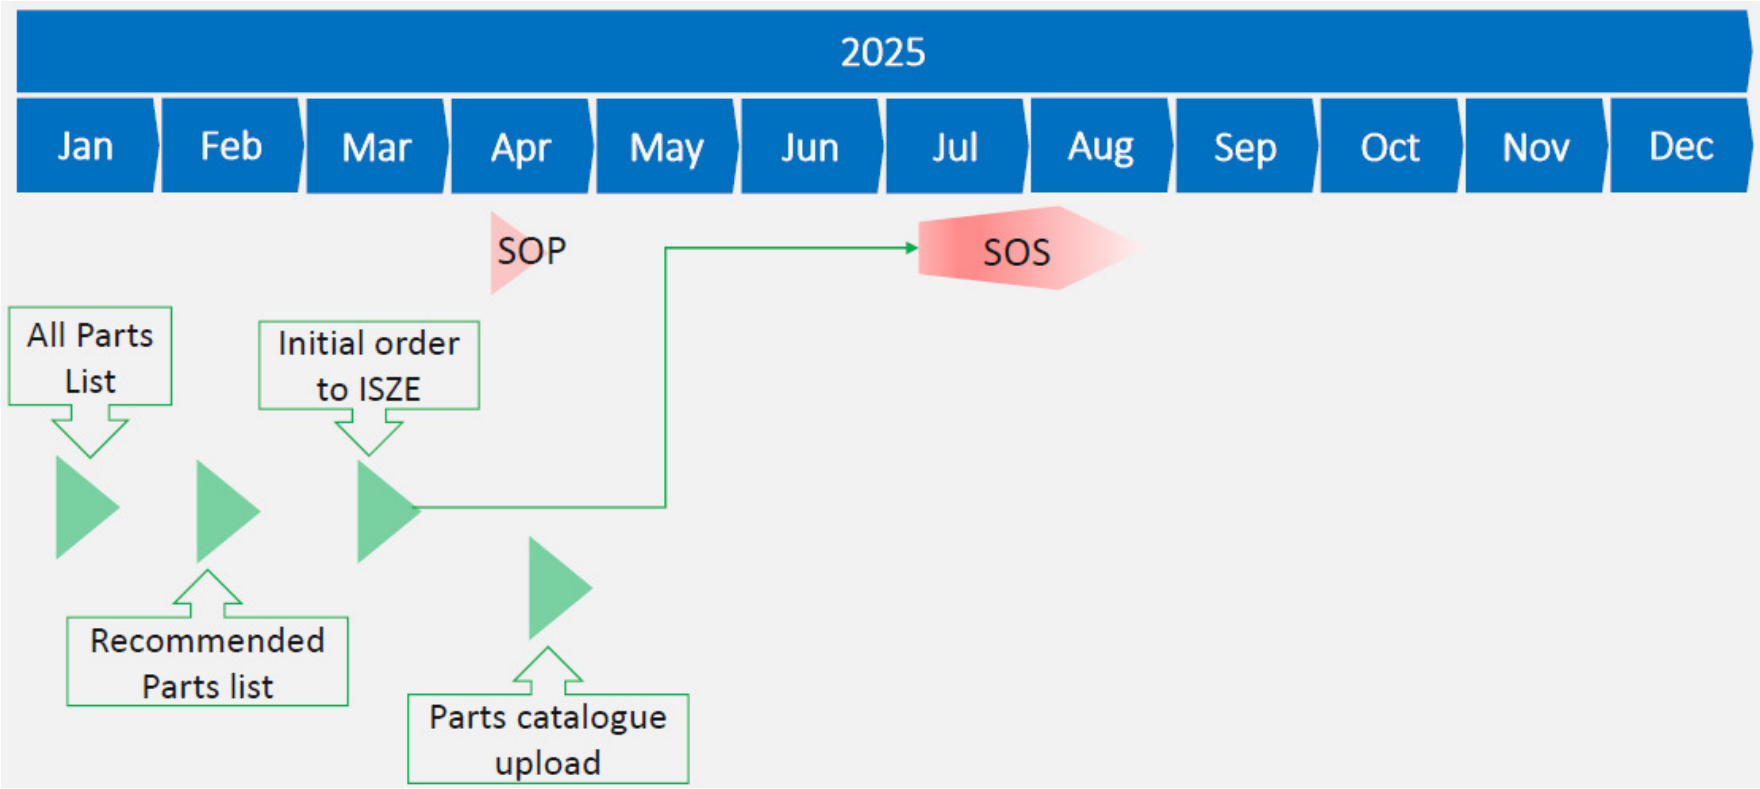

ISZE's Mid Term Business Plan (MTBP)

- **Increase customer retention via Repair & Maintenance (R&M) program**

In cooperation with IMG, ISZE will support Distributors (DB) re. R&M program, to secure revenue from stable service intake

- DBs with R&M – details checked
  - ✓ DB's to set target for new contracts + ISZE's incentive
- DBs without R&M, we will support DB to adopt R&M
  - ✓ ISZE to support with incentive to set up this framework systemwise

EV D-Max parts preparation schedule

Note: SOP April is for LHD Vehicles. For RHD Vehicles, SOP will be October.
