ISUZU

Tender Intelligence as a Commercial Strategy

How ISZE, vehicle sales, and distributors can combine public procurement intelligence to grow genuine parts revenue and defend market share

Rev. 7 update, August 2026: live tender monitor stats refreshed (778 notices vs. 579 in v6). Mail search surfaced an active R&M incentive workstream with ITUK (stalled since Dec 2025) and a Portugal–Allianz R&M/RSA partnership now scaling European-wide — both previously undocumented in this brief. Also a live, resolved example: Astara Poland's 173-vehicle R&M fleet tender, SPA pricing approved 21 Aug 2026.

SECTION 1

Executive Summary

Public procurement represents one of the most transparent, predictable, and underutilised commercial channels available to Isuzu's European distribution network. Every year, hundreds of public authorities across Europe tender for light commercial vehicles, pickup trucks, and fleet maintenance contracts — the exact product categories where Isuzu competes. Yet Isuzu's distributor network has no systematic mechanism to identify, qualify, and act on these opportunities.

This brief argues for a three-entity approach: Isuzu Motors Intl Europe (vehicle sales), ISZE (aftersales intelligence hub), and the local distributor (commercial executor) operating as a connected pipeline rather than three independent silos. The tender monitoring platform already built by ISZE is the connective tissue for that pipeline.

€136B	52%	43.6%	17%
European aftermarket market size 2024	OEM genuine parts market share — declining	Ford Ranger European pickup segment share 2024	Ford Pro EBIT from aftermarket & services

Market benchmark figures unchanged from v6 (Ford Q3 2024 earnings, VW Annual Report 2024) — no fresher verified source pulled for this revision. Flag if you want these re-checked against 2025 filings.

The core problem is not product quality or price. It is visibility. Distributors do not know which public fleets in their territory contain Isuzu vehicles, who is maintaining them, and when those maintenance contracts are up for renewal. Tender intelligence solves the visibility problem.

> *"You should let me know when you have time what you think of it. We are the only OEM that doesn't collaborate on this with all parties (IMIE / ISZE / DB)."*
>
> — Jerome, forwarding v6 of this brief to Koen Matheussen, 20 Mar 2026

SECTION 2

The Integrated Commercial Approach

The current model is sequential and fragmented. Vehicle sales wins a fleet tender. Vehicles are delivered. The aftersales relationship either develops organically or — more often — it does not. ISZE has no visibility into which fleets have been won. The distributor sources parts from whoever is convenient. The connection between vehicle placement and parts revenue is left to chance.

Three actors, one pipeline

Actor	Role in the pipeline	What tender intelligence adds
Vehicle Sales dept.	Identifies and converts fleet vehicle purchase tenders. Delivers the vehicles.	Early sight of planning-stage tenders. Time to build buyer relationship before tender opens. New registrations fed back to ISZE immediately as UIO data.
Aftersales dept.	Parts supply hub. Pricing, SPA agreements, genuine parts strategy. Fleet intelligence owner.	Runs the tender monitor weekly. Qualifies leads. Routes to right distributor. Tracks which fleets are in the active parts pipeline.
Distributor (DB)	Local commercial executor. Services the fleet, wins the service contract, places parts orders with ISZE.	Receives a pre-qualified lead brief per opportunity. Clear action: approach the fleet buyer or the maintenance contract winner. No tender jargon — just who to call.

Live example, resolved — Astara Poland, 173-vehicle fleet tender NEW

29 Jul	Astara Poland	Bidding a public fleet tender, 173 vehicles, for a customer that already runs Isuzu and is satisfied. Tender requires a 3-year R&M contract (provided via IAP through the dealer network) and conversion from alloy to steel wheels with new TPMS sensors. Astara requests a 35% SPA discount on 3 part numbers to keep the base vehicle competitive.
30 Jul	Koen Matheussen	While reviewing the discount request, asks Astara for Poland LCV parc size — the DVLA-style parc cross-reference this brief recommends, already happening informally.
18–21 Aug	Astara → Jerome	Astara pushes for a decision (dealers need the calculation by 20 Aug). Jerome approves the requested discount level on 21 Aug: *"please proceed with this requested price... for future tenders don't hesitate to contact us."*
status	Pending	SPA pricing granted; bid submission to the contracting authority follows. Award outcome not yet known as of this revision — worth capturing as the first entry in the win/loss log proposed in Section 6.

Source: Jerome/Koen ↔ Astara Poland (Łukasz Krzemiński) email thread, 29 Jul–21 Aug 2026, subject "Tender"/"RE: Tender".

The parts revenue lifecycle

A single fleet tender win of 20 vehicles generates a parts revenue stream over the vehicle's 8–10 year operational life. Using a benchmark of £580 per vehicle per year, a fleet of 20 units represents approximately £116,000 in annual parts potential — or £928,000 over an 8-year lifecycle. That figure assumes full genuine parts capture through the authorised channel.

Fleet scenario	Units	Annual parts potential	8-year lifecycle value
Small public tender (e.g. municipal)	10	~£58,000	~£464,000
Medium fleet (police, utility)	30	~£174,000	~£1.4M
Large framework (national)	100+	~£580,000+	~£4.6M+

Based on UK distributor True Sales benchmark of £580/vehicle/year. Unchanged from v6 — no newer benchmark run this cycle.

Where the R&M Motion Already Stands NEW

The rest of this brief argues ISZE should build a systematic R&M motion. Mail search for this revision found that two real, named workstreams already exist — one stalled, one live and scaling. Both are internal to ISZE / IMIE and were not previously reflected in this document.

Workstream A — ITUK R&M incentive (stalled)

Oct 2025	Internal	"Key action points + Break-even study + R&M contracts (real garant proposal)" — break-even study done, proposal from R&M administrator Real Garant discussed internally.
Nov 2025	Yoshimoto-san	Proposes an ITUK incentive support program, to be refined by ITUK. Discussion paper: "ITUK Vehicle Sales Incentive Discussion Paper."
Nov–Dec 2025	Jerome ↔ Duncan Young, Stuart Beeton, Tim Hicks (ITUK)	ISZE pitches the R&M incentive, including an "Operational Kickback Mechanism" — a financial transfer from ISZE to ITUK to fund the DB-level incentive.
9–11 Mar 2026	Jerome	Chases ITUK: *"We face some pressure as we are nearing the end of this fiscal year and have not received any updates... This was already end of December and ISZE has not received any update."* Duncan Young confirms the incentive proposal is still being worked on internally at ITUK, no committed timeline.
since	—	No further update found in mail through Aug 2026. **Open loop — status unconfirmed.**

ITUK's own R&M contract penetration — real, current, below target
ITUK's Sept 2025 KPI update (relayed by Tim Hicks, cited by Jerome Mar 2026): against a CY2025 registration plan of 1,310 units (≤3.5t) and 1,160 units (>3.5t), both at a 25% penetration target — actuals were **140 EWA/free-servicing contracts (30.67% penetration, above target)** but only **68 full R&M/Service Select contracts, 43 new + 25 extended (17.12% penetration, below the 25% target)**. This is the concrete, sourced version of the "capture rate well below target" argument in Section 4 — it is UK R&M contract penetration specifically, not overall genuine parts capture, and it is nearly a year old. Worth asking ITUK for a current figure before quoting it further.

Workstream B — Portugal / Astara ↔ Allianz Partners R&M & RSA (live, scaling)

Aug 2025	Filipe Paiva (Astara)	D-Max R&M contracts to be supplied by Allianz, but "large delay" — Allianz slow to finalise values, "do not have much experience working with Isuzu and lack historical comparisons with other countries." N/F-Series in final stages separately.
Mar 2026	Jerome → Filipe Paiva	Still chasing a basic status update on the CV (P700) R&M program — no committed answer captured in this scan.
7 Jul 2026	Bart Symons → Allianz Partners (Mario Solano)	*"We are pleased to see that the cooperation with Isuzu Portugal is now starting... the interest in exploring a broader European rollout is now very concrete."* Requests intro to Allianz's European team.
22 Jul 2026	Allianz Partners	Confirms the live "Partnership in Portugal for RSA and Maintenance contracts with ISUZU/ASTARA Group," connects Bart to Allianz Group Europe contacts (Josef Schlosser, Johannes Sallinger) to discuss European-level rollout.

The two workstreams and the live tender converge on the same distributor group. Astara — the group whose Portugal operation is the pilot for the Allianz R&M/RSA partnership — is the same DB running the Poland 173-vehicle tender in Section 2, where the buyer explicitly required a 3-year R&M contract. Astara Poland cited "IAP" as the R&M provider for that specific deal, not Allianz by name — whether IAP and the Allianz/Real Garant workstreams above are the same arrangement, related, or separate per-market choices is not established from mail alone. Worth a direct check with Bart Symons or Koen Matheussen before this brief states a single unified R&M supplier story.

R&M contracts — the highest-value tender category

Within public procurement, there are two distinct tender types relevant to Isuzu's network: vehicle purchase tenders (a fleet buys new vehicles) and Repair & Maintenance contracts (a fleet outsources ongoing servicing to a third party for a fixed multi-year period). For ISZE and its distributors, the R&M contract is by far the more commercially valuable of the two.

313

of 680 live tender-monitor opportunities flagged R&M (46%) — live feed, 24 Aug 2026

2

current Attack-tier opportunities — both are fleet R&M frameworks

Advantage	Why it matters	Isuzu / DB implication
Predictable, recurring revenue	R&M contracts run 3–5 years. Parts demand is locked in for the contract duration.	ISZE can plan supply and SPA pricing with visibility. DB has a guaranteed parts order pipeline.
Zero IAM leakage during contract	Once an authorised DB wins the R&M contract, parts are sourced through the authorised channel.	Genuine parts capture rate goes from near-zero to near-100% for the covered fleet during contract life.
Lock-in effect	Switching maintainers mid-contract is operationally disruptive and contractually penalised.	A DB that wins at year 1 is likely to win the renewal at year 4. Each win compounds.
Fleet scale per contract	A single R&M tender covers every vehicle in the fleet, not just new units.	Highest leverage on existing UIO — no new vehicles need to be sold.
Positions DB as fleet partner	Winning R&M elevates the distributor from parts supplier to fleet operations partner.	Renewal and expansion conversations happen with the R&M holder.
Renewal visibility	R&M contracts must be re-tendered when they expire; the monitor catches this before award.	Incumbent DBs can be alerted when their own contract is approaching renewal.

Two live R&M fleet opportunities right now NEW

Country	Buyer	What	Deadline
Ireland	Horse Racing Ireland (HRI)	Single framework for vehicle-fleet management services	15 Sep 2026
Norway	Vestfold fylkeskommune (county)	Framework for operational leasing + R&M of the county's vehicle fleet	16 Sep 2026

Both scored Attack (highest tier) by the tender monitor as of 24 Aug 2026. Deadlines are close — need an owner assigned this week or they lapse unactioned.

SECTION 3

How Competitor OEMs Operate — Market Study

Isuzu is not operating in a vacuum. Its primary competitors in the light commercial vehicle and pickup segment have made systematic fleet intelligence and proactive aftermarket engagement a core part of their commercial model.

Ford Pro — The Blueprint

What is Ford Pro? Ford's dedicated commercial vehicle division, created 2021, covering vehicles, service, financing, and software under one umbrella for business and public-sector fleets.

- **€66 billion revenue, €6.8 billion EBIT (2024)** — 10.3% margin, most profitable commercial vehicle operation in the industry.
- **Target: 20% of EBIT from software and services by 2026.** Aftermarket parts, software, and services already contribute 17% of Ford Pro EBIT.
- **Ford Pro Intelligence platform** analyses 1 billion vehicle data points daily — the fleet knows before the garage does when a service is due.
- **2,400 mobile service vehicles** in Europe — repair orders grew 70% in 2024.

Figures unchanged from v6 (Ford Q3 2024 earnings). No fresher verified source pulled this cycle — flag if you want 2025 filings checked.

Why tender win rate is the wrong metric to chase

	Company A	Company B
Tender win rate	40%	25%
Genuine parts capture post-sale	Near zero	High — SPA terms agreed at delivery
Revenue per vehicle, 8-year lifecycle	Vehicle margin only	Vehicle margin + £4,600+ per unit
Conclusion	Looks better on a win-rate scorecard.	Generates 5–10× more total commercial value.

The Ford Pro model in one sentence: identify the fleet before it tenders, embed the data connection at delivery, and convert every service event into a genuine parts order — automatically. The tender is the entry point. The aftermarket is the business.

Volkswagen Commercial Vehicles — Subscription Lock-in

- **Connect Pro subscriptions generated €127 million in 2024.** Factory-embedded telematics route service work to authorised VWCV dealers rather than independent garages.

Toyota — Structural Reorganisation Around Aftersales

Toyota merged its inbound and aftermarket supply chain departments into a single division (PDAD), with an explicit mandate to improve genuine parts capture.

Stellantis and Mercedes-Benz Vans

Stellantis has stated it is following the Ford Pro model. Mercedes-Benz Vans operates a dedicated fleet division with direct public procurement engagement teams in Germany, France, and the UK.

Competitive positioning summary

OEM	Fleet intelligence approach	Genuine parts mechanism	Isuzu gap
Ford Pro	Dedicated business unit, 1B data points/day	Auto-triggers parts orders via telematics	No comparable intelligence operation
VWCV	Factory telematics, €127M Connect Pro	Maintenance alerts route to authorised channel	No telematics connectivity in ISZE model
Toyota	PDAD structural merger	Integrated supply chain reduces IAM leakage	ISZE operates as pass-through
Mercedes Vans	Dedicated public fleet sales teams (DE/FR/UK)	Direct fleet relationship maintained post-sale	ISZE relies on distributor initiative

Sources: Ford Q3 2024 earnings; VW Annual Report 2024; Toyota PDAD announcement. Unchanged from v6.

SECTION 4

The Real Cost of Doing Nothing

The default position — continuing without a structured tender intelligence function — is not a neutral choice. It is an active decision to cede ground to competitors, independent aftermarket operators, and erosion of the genuine parts base.

A genuine parts capture rate well below 10% in at least one key distributor market means ISZE is watching the majority of its addressable aftersales revenue flow to independent aftermarket operators. **It becomes harder to recapture, not easier.** See Section 2 for a more current, narrower proxy on this: ITUK's own R&M/Service Select contract penetration was 17.12% against a 25% target as of Sept 2025.

Flag — the Kosha trajectory below needs re-confirming NEW

Table unchanged from v6 (IML Kosha study, Jan 2026; ISZE PL Plan FY2026–2028). A separate file — the BP FY27 network budget reviewed 24 Apr 2026 — carries a note that it *"replaces Kosha €35.3M CY2025 sales-share proxy"* with a €35.28M VP network total. That implies the Kosha basis below may be superseded, but the BP FY27 file only gives one year's budget, not a restated FY2026–FY2031 curve. Numbers below are unchanged because I cannot verify a replacement trajectory — treat this as last-confirmed-March-2026 until you say which plan is current.

FY Year	Kosha target (€M)	Market CAGR implied (€M)	Gap vs. market growth
FY2024 actual	€29.6M	€29.6M	—
FY2026	€32.3M	€33.7M	Market ahead
FY2028	€37.5M	€38.5M	Market ahead
FY2031	€52.1M	€43.2M	+€8.9M must come from new commercial mechanisms

Market CAGR implied = 6.35% applied to FY2024 baseline. Unchanged from v6, see flag above.

Every R&M tender missed is a competitor locked in for years

When a public authority tenders for fleet maintenance and the winning maintainer has no relationship with an authorised Isuzu dealer, that maintainer will source parts from a regional IAM wholesaler. Breaking that relationship 3 years into a contract requires significant price or service advantage. **The window to intervene is at contract start, not at renewal.**

Cost category	Estimated annual impact	Notes
Genuine parts revenue gap (UK)	€3.5M+	Internal gap analysis. Unchanged from v6 — no newer gap run this cycle.
Kosha shortfall vs. market growth (FY2031)	~€8.9M	See flag above — basis needs reconfirming.
GP margin compression (per Kosha plan)	−11pp by FY2028	GP% falls from 37.4% (FY2025 actual) to 26.1% (FY2028 Kosha).
ITUK R&M incentive, stalled since Dec 2025	Unquantified	See Section 2 — kickback mechanism proposed, no confirmed ITUK response in 8+ months of mail.

SECTION 5

Zero Cost to Start — and a Framework for Winning When Price Is the Objection

The tender monitor: an intelligence asset that already exists UPDATED

The ISZE Tender Monitor is operational, no software licence, no external vendor, ~4h/week staff time. **In the run of 24 Aug 2026 it processed 778 procurement notices, up from 579 in the March run**, producing 680 scored opportunities: 2 Attack, 202 Selective, 152 Watch, 324 Ignore. Cost per notice processed: zero.

778	680	204
notices processed, 24 Aug 2026 run (v6: 579)	scored opportunities live	Attack + Selective — action-worthy now

Approach	Annual cost	Coverage	Time to deploy
ISZE Tender Monitor (current)	€0 software + ~4h/week staff time	27+ markets, UK, Israel — auto-updated weekly	Already live
Commercial tender intelligence platform	€8,000–€25,000/yr licence	Broad but not Isuzu-specific	Weeks
Ford Pro Intelligence platform	Hundreds of millions capex	Real-time vehicle telemetry, 1B data points/day	Years

Five-tier response framework, when price is the objection

Tier 1 — Influence criteria before the tender opens

Cost: DB time only.

When the tender monitor flags a Prior Information Notice, the DB engages the buyer during consultation to legitimately suggest evaluation criteria covering lifecycle cost, service network density, parts availability, and uptime — not price alone.

Tier 2 — Pilot fleet strategy

Cost: ISZE provides a clear pilot pricing policy.

For 30+ vehicle tenders, propose a pilot of 5–10 units at competitive pricing with a framework for full fleet expansion at renewal. Standard Caterpillar approach: pilot priced to win, renewal priced to margin.

Tier 3 — Bundled maintenance bid

Cost: ISZE develops one standard maintenance contract template.

Bid vehicle plus a 5-year genuine maintenance contract as a single package. This disqualifies pure fleet brokers who cannot service the vehicles. **This is precisely the mechanism the Astara Poland case (Section 2) is running right now** — a live proof point, not a hypothetical.

Tier 4 — Total Cost of Ownership positioning kit

Cost: ISZE compiles data into one reusable one-pager.

Isuzu D-Max vs. Ford Ranger vs. Toyota Hilux over an 8-year fleet cycle, including parts cost benchmarks. Used in Tier 1 pre-tender engagement and in bid responses.

Tier 5 — National framework agreement qualification

Cost: Significant one-time effort. Requires IMIE lead. 12–24 months.

Ford, VW, Toyota, and Stellantis dominate European public sector supply via national frameworks — Crown Commercial Service (UK, RM6228), UGAP (France), the Dutch central government framework. Once qualified, call-offs bypass full competitive tenders. Highest-leverage action available.

SECTION 6

Closing the Loop — Operational Intelligence from the Field

A tender monitor that only sends leads outward — and never receives feedback — is a one-way broadcast. Under EU Procurement Directive 2014/24/EU (Article 55), any unsuccessful bidder is legally entitled to request a debrief from the contracting authority — a right most of Isuzu's network never exercises.

Step	Action	What it produces
1. Tender closed — lost	DB requests formal debrief within 15 days of award notification.	Evaluation scorecard.
2. DB reports to ISZE	One-form submission: lost on price / spec / network / capacity / other.	ISZE builds a loss reason database.
3. ISZE analyses patterns	If 70%+ of losses are on price for a class: SPA pricing review.	Actionable pricing/SPA insight.
4. R&M award follow-up	DB identifies R&M winner and contacts as authorised parts supplier.	Parts revenue from won-by-others contracts.

The Astara Poland case is this loop starting on its own NEW

Nobody built the Step 2 form yet, and this deal came in anyway — a DB, mid-bid, asking ISZE directly for the R&M-linked pricing lever it needed. Immediate ask: capture the pricing ISZE granted (21 Aug) and the eventual award outcome as the first real entry in the loss/win database this section proposes.

SECTION 7

Recommendations

Sequenced by effort and time to impact. First three executable within current ISZE resource base, no additional budget.

Immediate (0–4 weeks)

- Formalise the weekly tender monitor run as an ISZE operational activity. Assign one owner.
- **Assign an owner to the two live Attack-tier opportunities before their mid-September deadlines** (Ireland/HRI 15 Sep, Norway/Vestfold 16 Sep) — see Section 2c. Both lapse unactioned otherwise.
- Capture the Astara Poland outcome (pricing granted, win/loss) as the first entry in the loss/win reason log proposed in Section 6.
- **Get a status check on the ITUK R&M incentive** — last confirmed activity was March 2026, no response found since. Either it's dead and should be retired from planning, or it needs re-escalating.

Short term (1–3 months)

UK-first recommendation needs a caveat UPDATED

v6 recommended piloting the full pipeline in the UK first as the most data-rich market. Still true for parc/DVLA data richness — but as of the 24 Aug 2026 run, the UK's 125 live opportunities score 0 Attack, 0 Selective, 59 Watch, 66 Ignore. Nothing in the UK feed is currently at action tier. Either pilot the DVLA cross-reference step now (data readiness) while waiting for a UK Attack/Selective opportunity, or open the live pilot on Poland/Romania instead, where Attack-tier and R&M-flagged volume already exists — and where Astara Poland is already running the exact motion this brief describes.

- Run the tender monitor output against DVLA parc data. Flag high-priority where a buyer already runs Isuzu.
- Present the tender pipeline as a standing item at the next distributor review cycle.
- Clarify whether "IAP" (Astara Poland's stated R&M provider) is the same arrangement as the Allianz/Real Garant workstreams in Section 2, or a separate per-market choice — needed before this brief can describe one unified R&M supplier model.

Medium term (3–12 months)

- Extend the pilot to Romania (71 live notices) and Poland (51) — strongest CEE volume in the live feed, consistent with v6's call.
- Formalise the aftersales onboarding protocol for new fleet wins — Astara Poland is already the first live test of exactly this handoff.
- If the Portugal–Allianz partnership's European rollout (Section 2) proceeds, align the tender monitor's R&M flag directly to it so flagged opportunities route to a named commercial mechanism, not just a generic "approach the buyer" note.

SECTION 8

Appendix — About the ISZE Tender Monitor

The ISZE Tender Monitor is a Python-based platform that scrapes public procurement portals weekly across 27 European markets, Norway, Finland, Israel, and the UK. It classifies every notice against ISZE's CPV target list, scores it on three dimensions (Fit, Win, Econ), and generates a distributor-ready lead brief per opportunity.

Source	Coverage	Status
TED (EU Official Journal)	27 EU member states + above-threshold DE, FR, ES, IT, PL, RO…	Live
Find a Tender (UK)	UK above-threshold public contracts	Live
Contracts Finder (UK)	UK lower-value contracts (councils, NHS, police)	Live
Doffin (Norway)	Norwegian public procurement	Requires free API key — unchanged since v6
HILMA (Finland)	Finnish public procurement	Requires free API key — unchanged since v6
Israel MR Gov	Israeli public procurement (RSS)	Live
DTVP (Germany)	German national portals — below-threshold	In progress — unchanged since v6

Country coverage, 24 Aug 2026 run NEW

Country	Notices	Country	Notices
United Kingdom	125	Netherlands	46
Romania	71	Spain	45
Germany	66	Czechia	37
France	51	Poland	51
Italy	25	Portugal	17

Top 10 of 25 countries with live results shown. Full breakdown in `01_data/14_dashboards/tender_data.json`.

Scoring model

Each notice is scored on three axes: Fit, Win, Econ. The composite score drives a four-level decision: Attack / Selective / Watch / Ignore. R&M contracts always route to at least Watch with a parts-supply approach brief regardless of score.

For questions about this brief or the tender monitor platform, contact:
