ISZE · PARTS PRICING · INTERNAL

Market by market: where the +5% should land

Twenty-one markets, each read on the same evidence: what it buys, how its fleet moves, how much of its service work we win, what it pays against our list, and what dealers and distributors say. The proposal stays one list price per part; the market layer is a distributor condition, which SAP already carries.

30 September 2026 · a proposal on paper — no price, list or condition changed.

1 The answer

Service parts are where markets differ; repair parts are not. In 8 of 21 markets the evidence says keep service parts (filters, brakes, clutch) at today's price: the fleet is ageing and we are losing the service work, dealers measurably react, or the market runs on imported vehicles we do not even count. Repair parts follow their factory move everywhere — that is where older fleets spend more and have no alternative. Israel adds one more hold: collision and lighting, because of the insurance total-loss rule.

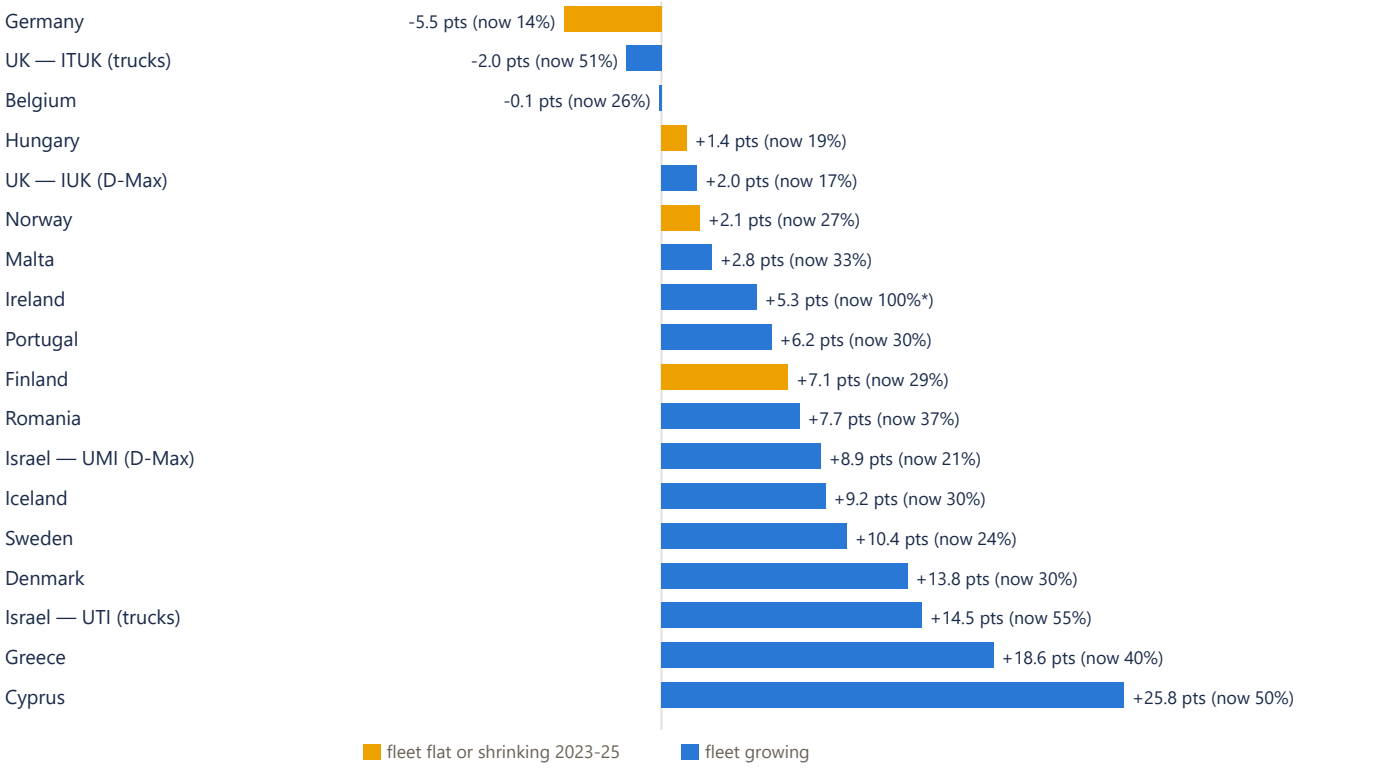

MARKET	PARTS BILLED 2025	FLEET 2023→25	FLEET 2026 FORECAST	SERVICE SHARE 2025	CHANGE SINCE 2023	PAYS VS LIST (STOCK)	URGENT ORDERS	SERVICE PARTS	BODY & LIGHTING

Colours: fleet red = flat or shrinking; service share red = below 80% of the network's 28%; change red = falling; urgent orders red = over 30% of the market's euro on rush or vehicle-off-road orders, which are billed above list. Repair parts: factory move in every market.

What the market layer costs, and who carries it

Extra euro in the current proposal	Given up by the holds	Either: other parts carry it	Or: accept a lower total
EUR 1,629,793	**EUR 388,040**	**+7.0%**	**+3.8%**
+5.00% on EUR 32,595,853	23.8% of the extra euro	instead of +5.3%, total stays +5.0%	on the whole book

Across all markets: flat or shrinking fleets win the least service work

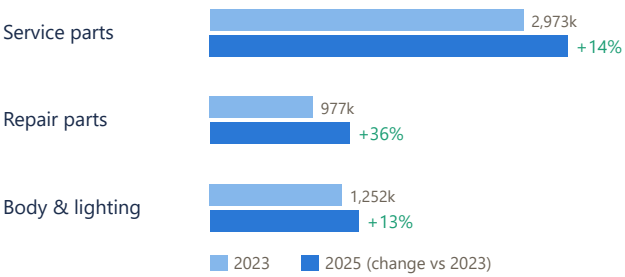

Service share = the service parts a market's distributor bought, against what its fleet should need at the service intervals. A growing fleet raises that yardstick, which works against it — and growing fleets still gained most. Across the 18 markets with a measure, the rank correlation between fleet change 2023-25 and share change is +0.49. The hold decisions also use the 2026 fleet forecast, which is why Belgium, Ireland and UMI can be read as ageing on their market pages.

2 UK — IUK (D-Max) · Isuzu UK

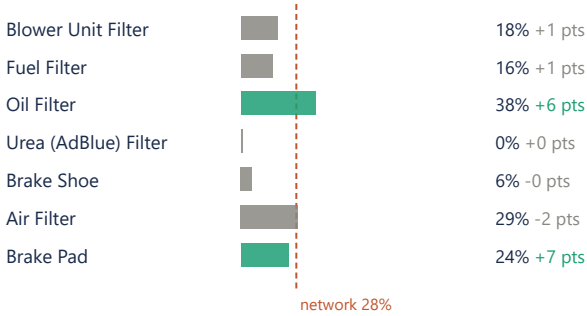

Service parts: hold at today's price | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 6,131,920	47,783	17%	97.3%
+18% vs 2023	+3% vs 2023; 2026: -6%	+2.0 pts vs 2023 · network 28%	off-road orders 105% · urgent 11% of euro

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Electrical +248k, Steering +165k, Brakes +161k, Accident & Body +160k.
- Fell most: Chassis Frame -91k, Engine -32k.
- On parts bought in both years: +845k from quantity, -107k from price.
- Genuine is 90% of the service parts it buys; the rest is BVP.
- 3,766 different part numbers in 2025 (0.08 per official vehicle); 1.4% of 2023-25 billing on 849 part numbers no other market bought (e.g. engine asm, label; caution, shaft; strg,2nd).
- Dealer response to the April 2026 increase: -1.08 (±0.90); dealer units -6.5% over the same months.

What is specific here

- New D-Max demand has collapsed: the double-cab company-car tax change (April 2025) and the zero-emission rules; the pickup market was down 61% year on year in August 2026.
- Dealers say brake parts and wipers are too dear against the aftermarket and ask for a value range (review 6 Aug 2026).
- Only market where dealers measurably bought less of a part after its April 2026 price rise.
- Five-year warranty: aftertreatment parts that cannot be bought elsewhere sit at their class price, no higher.

Why this recommendation, and what it does

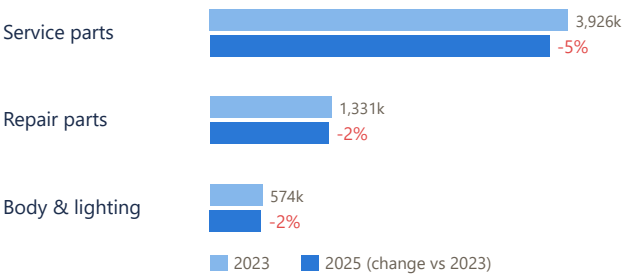

- dealers measurably bought less of a part after its April rise (-1.08, ±0.90).
- ageing fleet (fleet +3% 2023-25 and -6% in the 2026 forecast) and weak service position (service share 17% (network 28%), +2.0 pts since 2023).
- documented price complaint on service parts, with service share 17% (network 28%), +2.0 pts since 2023.
- Today's proposal on this market: Service parts: EUR 3,480,868 billed, factory move +5.5%, proposal +4.2% = EUR 147,778; Repair parts: EUR 1,456,750 billed, factory move +6.8%, proposal +6.2% = EUR 89,771; Body & lighting: EUR 1,291,658 billed, factory move +6.5%, proposal +6.0% = EUR 77,279.
- Holding service parts gives up EUR 147,778 here.

3 UK — ITUK (trucks) · Isuzu Truck UK

Service parts: factory move | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 5,580,414	22,389	51%	96.2%
-4% vs 2023	+11% vs 2023; 2026: +8%	-2.0 pts vs 2023 · network 28%	off-road orders 105% · urgent 12% of euro

What it buys, 2023 against 2025

Service share by category, 2025

* More than the counted fleet should need: vehicles we do not count (imports, or a fleet figure that is too low) buy here. Not a real share.

What drives it

- Grew most: Intake Exhaust Emission +86k, Engine +71k, Steering +35k, Literature Marketing +35k.
- Fell most: Suspension -122k, Electrical -73k, Brakes -63k.
- On parts bought in both years: -169k from quantity, +272k from price.
- Genuine is 83% of the service parts it buys; the rest is BVP.
- 3,809 different part numbers in 2025 (0.17 per official vehicle); 12.6% of 2023-25 billing on 1947 part numbers no other market bought (e.g. spring asm; leaf,frt, sensor; nox, spring asm; leaf,frt).
- Dealer response to the April 2026 increase: +0.45 (±0.50); dealer units +1.2% over the same months.

What is specific here

- Brake price is the number one dealer complaint (18 Aug 2026); N75 pad units fell 15.5% in two years — the pad kits are now held.
- Operator licensing gives the inspection appointment, not the sale: it does not require genuine parts.
- Dealers did not buy less after the April 2026 rise; UK truck dealer purchases were up 3.7% March-August.
- N75 air filter sits at about 20% cover — a fitment problem, not a price problem.

Why this recommendation, and what it does

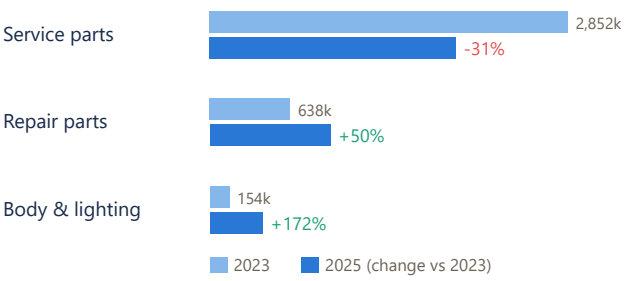

- fleet +11% 2023-25 and +8% in the 2026 forecast; service share 51% (network 28%), -2.0 pts since 2023: the fleet is growing, so none of the hold rules applies.
- The pad kits are already held (your call, 30 September).
- Today's proposal on this market: Service parts: EUR 4,242,505 billed, factory move +6.6%, proposal +4.4% = EUR 187,811; Repair parts: EUR 1,405,748 billed, factory move +6.8%, proposal +6.6% = EUR 93,025; Body & lighting: EUR 601,700 billed, factory move +6.4%, proposal +5.8% = EUR 34,814.

4 Israel — UTI (trucks) · UTI

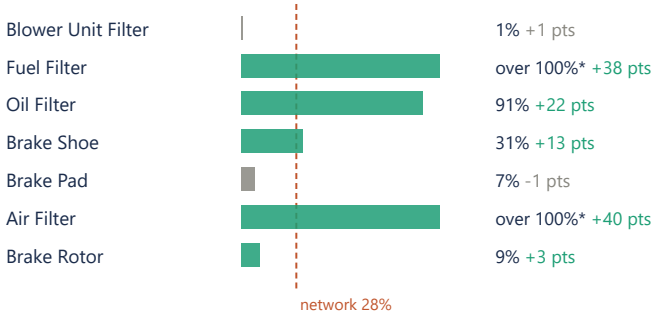

Service parts: factory move | Repair parts: factory move | Body & lighting: hold lighting

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 3,337,117	10,336	55%	86.0%
-8% vs 2023	+7% vs 2023; 2026: +4%	+14.5 pts vs 2023 · network 28%	off-road orders 94% · urgent 12% of euro

What it buys, 2023 against 2025

Service share by category, 2025

* More than the counted fleet should need: vehicles we do not count (imports, or a fleet figure that is too low) buy here. Not a real share.

What drives it

- Grew most: Accident & Body +265k, Electrical +246k, Chassis Frame +68k, Transmission +34k.
- Fell most: Maintenance Service -574k, Intake Exhaust Emission -160k, Fuel System -80k, Steering -57k.
- On parts bought in both years: -983k from quantity, +3k from price.
- Genuine is 41% of the service parts it buys; the rest is BVP.
- 2,201 different part numbers in 2025 (0.21 per official vehicle); 9.7% of 2023-25 billing on 1155 part numbers no other market bought (e.g. cab asm; service,wo/elect, engine asm; partial, cab asm; service,wo/elec).

What is specific here

- 1,700 trucks on five-year repair and maintenance contracts.
- Collision complaint: N/7.5 front package EUR 679 to EUR 2,144; bumper went from one part to four; grille +880%, rear light +1,228%.
- The Israeli total-loss rule was verified only up to 3.5 t; for UTI's trucks it is unverified.
- Already buys at 86% of list on stock orders (customer condition).

Why this recommendation, and what it does

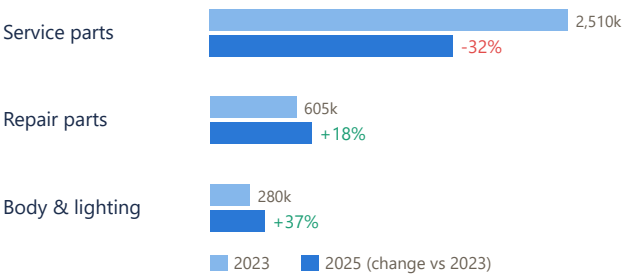

- fleet +7% 2023-25 and +4% in the 2026 forecast; service share 55% (network 28%), +14.5 pts since 2023: the fleet is growing, so none of the hold rules applies.
- Lighting only, not all body parts: the heavy-vehicle total-loss rule is unverified, and the bigger lever is the bumper and grille packaging, which is a question for IML, plus a paid-on-genuine-use arrangement with insurers.
- Today's proposal on this market: Service parts: EUR 2,067,685 billed, factory move +4.7%, proposal +3.7% = EUR 75,930; Repair parts: EUR 956,180 billed, factory move +6.9%, proposal +6.2% = EUR 59,692; Body & lighting: EUR 376,540 billed, factory move +7.4%, proposal +6.7% = EUR 25,177.

5 Israel — UMI (D-Max) · UMI

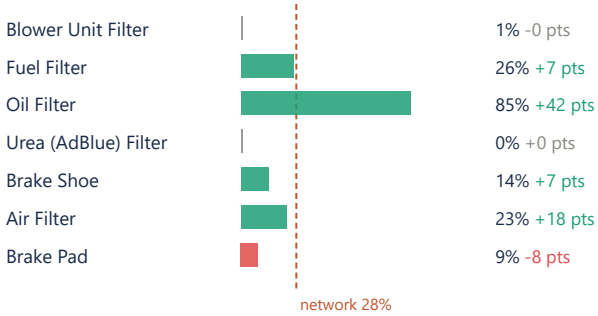

Service parts: hold at today's price | Repair parts: factory move | Body & lighting: hold body, collision and lighting

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 2,799,067	18,542	21%	91.4%
-18% vs 2023	+2% vs 2023; 2026: -7%	+8.9 pts vs 2023 · network 28%	off-road orders 97% · urgent 13% of euro

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Accident & Body +104k, Maintenance Service +57k, Cooling +36k, Electrical +26k.
- Fell most: Engine -416k, Fuel System -267k, Intake Exhaust Emission -133k.
- On parts bought in both years: -264k from quantity, +20k from price.
- Genuine is 33% of the service parts it buys; the rest is BVP.
- 2,366 different part numbers in 2025 (0.13 per official vehicle); 4.2% of 2023-25 billing on 431 part numbers no other market bought (e.g. engine asm, engine asm, gear oil lsd).

What is specific here

- The pickup sits inside the verified total-loss rule (up to 3.5 t); lamps may be replaced by a part of 'similar description' under the policy.
- 66% of pickups privately owned; leasing double cabs must use genuine parts for two years and run 34,443 km a year.
- Isuzu's share fell 34.6% to 27.6% against Chinese brands (IMIE, July 2026).
- Brake parts underperform on price against alternatives (review 12 Aug 2026).

Why this recommendation, and what it does

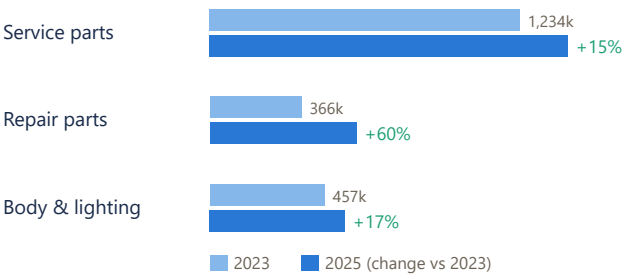

- ageing fleet (fleet +2% 2023-25 and -7% in the 2026 forecast) and weak service position (service share 21% (network 28%), +8.9 pts since 2023).
- documented price complaint on service parts, with service share 21% (network 28%), +8.9 pts since 2023.
- Against this: leasing double cabs must use genuine parts in their first two years and run the highest mileage of the pickup markets. If UMI's volume is mostly leasing fleets, its service parts could carry the factory move instead — UMI can tell us the split.
- Today's proposal on this market: Service parts: EUR 1,476,802 billed, factory move +5.1%, proposal +4.4% = EUR 65,193; Repair parts: EUR 597,877 billed, factory move +7.3%, proposal +6.6% = EUR 39,281; Body & lighting: EUR 354,482 billed, factory move +5.9%, proposal +5.4% = EUR 19,018.
- Holding service parts gives up EUR 65,193 here.

6 Germany · Isuzu Sales Deutschland

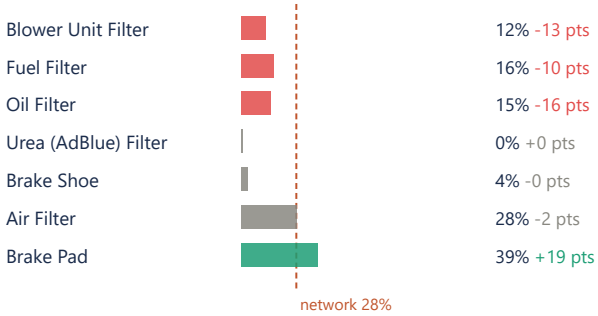

Service parts: hold at today's price | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 2,545,766	12,855	14%	99.8%
+24% vs 2023	-1% vs 2023; 2026: +5%	-5.5 pts vs 2023 · network 28%	off-road orders 123% · urgent 33% of euro

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Intake Exhaust Emission +123k, Steering +119k, Electrical +99k, Brakes +82k.
- Fell most: Maintenance Service -24k, Cabin Interior -13k.
- On parts bought in both years: +279k from quantity, +10k from price.
- Genuine is 89% of the service parts it buys; the rest is BVP.
- 4,131 different part numbers in 2025 (0.32 per official vehicle); 2.1% of 2023-25 billing on 662 part numbers no other market bought (e.g. turbocharger asm, shaft asm; prop,rr, filter asm).

What is specific here

- Independent workshops buy a comparable brake rotor at about EUR 80 against about EUR 100 through Isuzu, and fuel filters at about EUR 5.90 (review 5 Aug 2026).
- Isuzu's new-vehicle share rose 5.3% to 7.0%, but small-business demand is weak (IMIE).

Why this recommendation, and what it does

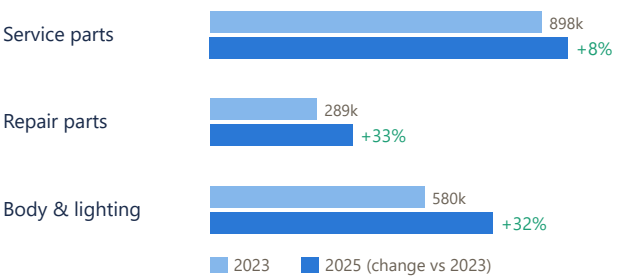

- ageing fleet (fleet -1% 2023-25 and +5% in the 2026 forecast) and weak service position (service share 14% (network 28%), -5.5 pts since 2023).
- documented price complaint on service parts, with service share 14% (network 28%), -5.5 pts since 2023.
- Today's proposal on this market: Service parts: EUR 1,530,329 billed, factory move +4.9%, proposal +3.9% = EUR 60,063; Repair parts: EUR 549,859 billed, factory move +6.6%, proposal +6.1% = EUR 33,326; Body & lighting: EUR 598,994 billed, factory move +6.7%, proposal +6.1% = EUR 36,630.
- Holding service parts gives up EUR 60,063 here.
- Also: 33% of this market's euro goes through urgent orders billed at up to 123% of list — a terms question worth as much as the list price.

7 Belgium · Astara (Isuzu Benelux)

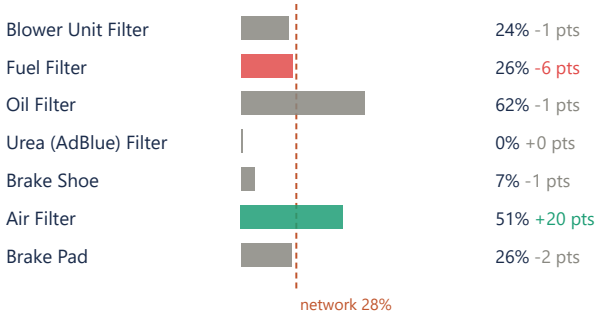

Service parts: hold at today's price | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 2,118,952	9,594	26%	99.8%
+20% vs 2023	+9% vs 2023; 2026: -3%	-0.1 pts vs 2023 · network 28%	off-road orders 107% · urgent 51% of euro

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Accident & Body +185k, Steering +63k, Intake Exhaust Emission +62k, Electrical +49k.
- Fell most: Engine -19k, Driveline Axle -12k.
- On parts bought in both years: +99k from quantity, +22k from price.
- Genuine is 68% of the service parts it buys; the rest is BVP.
- 4,383 different part numbers in 2025 (0.46 per official vehicle); 1.4% of 2023-25 billing on 551 part numbers no other market bought (e.g. engine asm; partial, transmission asm; manual, glass; windshield).

What is specific here

- Astara calls brake pricing 'a known structural issue' and wants a central fix, not piecemeal special prices (12 Aug 2026).
- Isuzu's new-vehicle share fell 11.2% to 3.3% with pre-registered stock weighing (IMIE).

Why this recommendation, and what it does

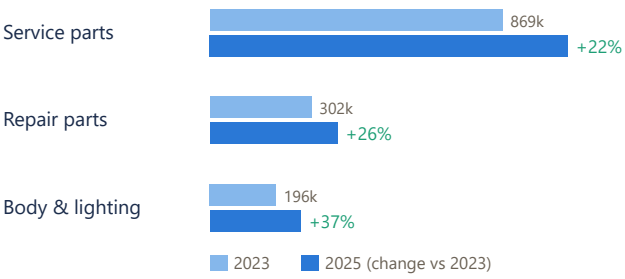

- ageing fleet (fleet +9% 2023-25 and -3% in the 2026 forecast) and weak service position (service share 26% (network 28%), -0.1 pts since 2023).
- documented price complaint on service parts, with service share 26% (network 28%), -0.1 pts since 2023.
- Today's proposal on this market: Service parts: EUR 1,033,215 billed, factory move +5.6%, proposal +4.4% = EUR 45,161; Repair parts: EUR 422,737 billed, factory move +6.9%, proposal +6.2% = EUR 26,227; Body & lighting: EUR 943,208 billed, factory move +6.7%, proposal +6.2% = EUR 58,378.
- Holding service parts gives up EUR 45,161 here.
- Also: 51% of this market's euro goes through urgent orders billed at up to 107% of list — a terms question worth as much as the list price.

8 Portugal · Astara Portugal (Imotors)

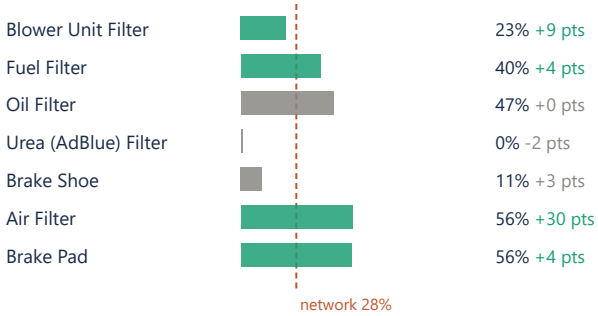

Service parts: factory move | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 1,712,791	8,176	30%	99.1%
+25% vs 2023	+34% vs 2023; 2026: -4%	+6.2 pts vs 2023 · network 28%	off-road orders 102% · urgent 15% of euro

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Accident & Body +74k, Steering +48k, Intake Exhaust Emission +41k, Brakes +39k.
- Fell most: Suspension -1k, Logistics Packaging -0k.
- On parts bought in both years: +287k from quantity, +9k from price.
- Genuine is 40% of the service parts it buys; the rest is BVP.
- 5,015 different part numbers in 2025 (0.61 per official vehicle); 7.8% of 2023-25 billing on 1507 part numbers no other market bought (e.g. gear set; final drive,rr, gear set; final drive, cage asm; diff,final drive).
- Dealer response to the April 2026 increase: -0.59 (±1.25); dealer units +20.4% over the same months.

What is specific here

- Isuzu's share fell 28.6% to 18.7% in severe price competition (IMIE, June 2026).
- Buyers chose the three-seat homologation to save tax; lowest mileage of the pickup markets (22,742 km a year).
- A BVP 3.5 t brake pad about 30% cheaper was cited as a useful alternative (review 29 Jul 2026).

Why this recommendation, and what it does

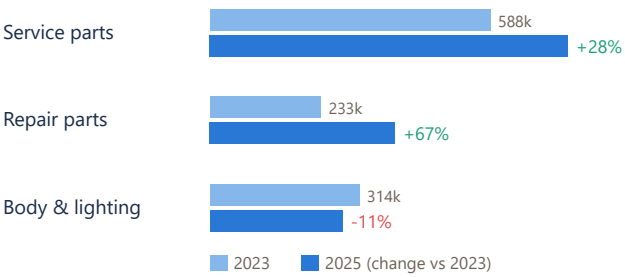

- fleet is ageing (fleet +34% 2023-25 and -4% in the 2026 forecast), but the service position holds (service share 30% (network 28%), +6.2 pts since 2023): no case to hold.
- a complaint is on file, but service share 30% (network 28%), +6.2 pts since 2023: answer it with BVP or a targeted special price, not the list.
- Today's proposal on this market: Service parts: EUR 1,100,939 billed, factory move +5.6%, proposal +4.4% = EUR 48,899; Repair parts: EUR 416,611 billed, factory move +6.8%, proposal +6.2% = EUR 25,825; Body & lighting: EUR 292,483 billed, factory move +6.8%, proposal +6.2% = EUR 18,171.

9 Norway · RSA

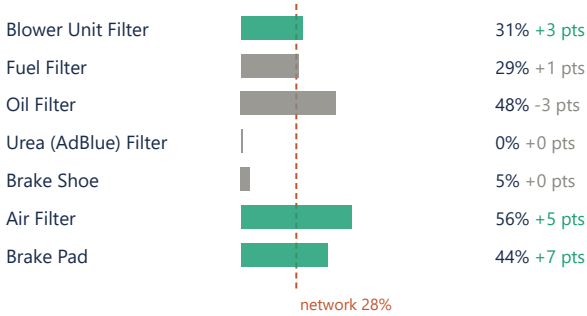

Service parts: hold at today's price | Repair parts: factory move | Body & lighting: factory move

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Steering +128k, Intake Exhaust Emission +91k, Electrical +74k, Brakes +68k.
- Fell most: Accident & Body -35k, Wheels Hub -7k.
- On parts bought in both years: +79k from quantity, +18k from price.
- Genuine is 82% of the service parts it buys; the rest is BVP.
- 1,828 different part numbers in 2025 (0.23 per official vehicle); 0.8% of 2023-25 billing on 109 part numbers no other market bought (e.g. step; body side, back asm; seat, step; body side).

What is specific here

- Combustion-engine pickup demand is shrinking fast; construction bankruptcies; Isuzu's share fell 35.7% to 13.1%; electric rivals strong (IMIE, July 2026).
- 68% of Norway's D-Max parts turnover is outside the warranty limits — the highest of all markets.

Why this recommendation, and what it does

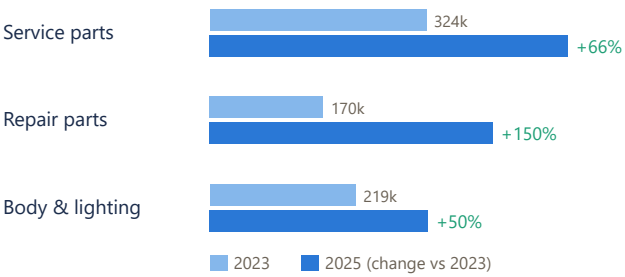

- ageing fleet (fleet -8% 2023-25 and -7% in the 2026 forecast) and weak service position (service share 27% (network 28%), +2.1 pts since 2023).
- Today's proposal on this market: Service parts: EUR 716,413 billed, factory move +4.6%, proposal +3.4% = EUR 24,492; Repair parts: EUR 403,947 billed, factory move +6.7%, proposal +6.0% = EUR 24,381; Body & lighting: EUR 302,271 billed, factory move +6.4%, proposal +5.9% = EUR 17,960.
- Holding service parts gives up EUR 24,492 here.

- Fell most: Clutch -1k, Unknown Review -0k, Fluids Chemicals -0k.
- On parts bought in both years: +282k from quantity, +3k from price.
- Genuine is 97% of the service parts it buys; the rest is BVP.
- 2,114 different part numbers in 2025 (0.25 per official vehicle); 1.3% of 2023-25 billing on 182 part numbers no other market bought (e.g. frame asm, junction block, body asm; rear).

What is specific here

- Isuzu still first year to date but lost a month to Ford; a Toyota grey-import spike has faded (IMIE, July 2026).

Why this recommendation, and what it does

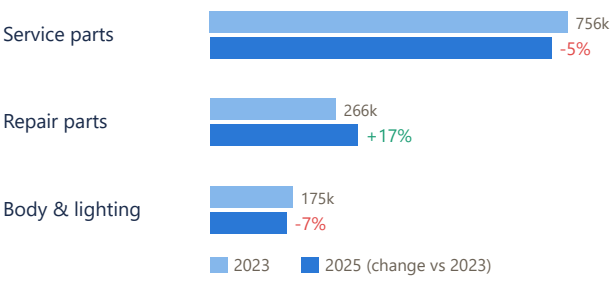

- fleet +33% 2023-25 and -2% in the 2026 forecast; service share 24% (network 28%), +10.4 pts since 2023: the fleet is growing, so none of the hold rules applies.
- Today's proposal on this market: Service parts: EUR 537,511 billed, factory move +5.7%, proposal +3.9% = EUR 20,942; Repair parts: EUR 359,020 billed, factory move +6.8%, proposal +6.2% = EUR 22,146; Body & lighting: EUR 388,051 billed, factory move +6.4%, proposal +5.9% = EUR 23,068.

11 Ireland · Harris Group

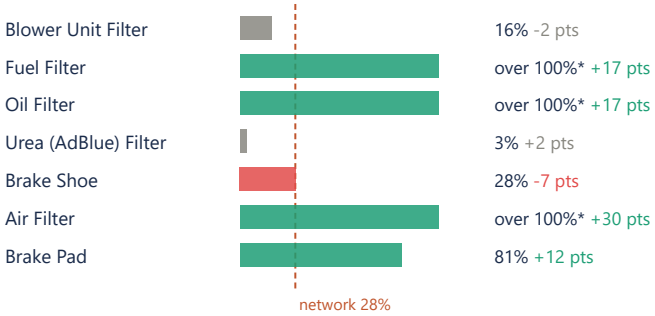

Service parts: factory move | Repair parts: factory move | Body & lighting: factory move

Parts billed 2025	Official fleet 2025	Service share 2025	Pays vs list, stock orders
EUR 1,195,660	3,056	100%*	99.7%
-0% vs 2023	+70% vs 2023; 2026: -15%	+5.3 pts vs 2023 · network 28%	off-road orders 107% · urgent 8% of euro

What it buys, 2023 against 2025

Service share by category, 2025

* More than the counted fleet should need: vehicles we do not count (imports, or a fleet figure that is too low) buy here. Not a real share.

What drives it

- Grew most: Electrical +27k, Intake Exhaust Emission +18k, Maintenance Service +12k, Cabin Interior +8k.
- Fell most: Wheels Hub -16k, Accident & Body -13k.
- On parts bought in both years: -93k from quantity, +23k from price.
- Genuine is 74% of the service parts it buys; the rest is BVP.
- 3,272 different part numbers in 2025 (1.07 per official vehicle); 3.1% of 2023-25 billing on 537 part numbers no other market bought (e.g. dpd asm, control unit; eng, radiator asm).
- Dealer response to the April 2026 increase: +1.07 (±0.76); dealer units +3.5% over the same months.

What is specific here

- Integrated importer: assembly plant, workshops, parts centre, 25 locations; registrations +41% in 2025; annual commercial test.
- Isuzu's share rose 8.2% to 11.6% (IMIE, June 2026). Harris will resend earlier pricing issues (review 6 Aug 2026).

Why this recommendation, and what it does

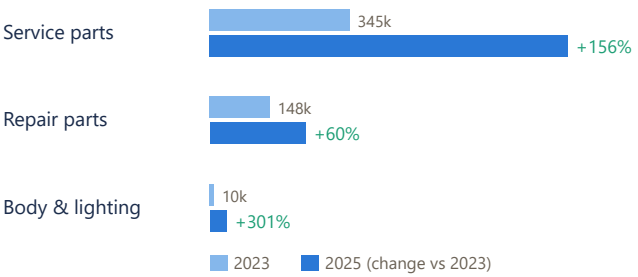

- fleet is ageing (fleet +70% 2023-25 and -15% in the 2026 forecast), but the service position holds (service share 100% (network 28%), +5.3 pts since 2023): no case to hold.
- A service share at or above 100% of the official fleet means the real fleet is bigger than counted — most likely used D-Max brought in from the UK; worth confirming with Harris.
- Today's proposal on this market: Service parts: EUR 647,405 billed, factory move +6.0%, proposal +4.4% = EUR 28,454; Repair parts: EUR 269,610 billed, factory move +7.1%, proposal +6.8% = EUR 18,292; Body & lighting: EUR 160,289 billed, factory move +6.7%, proposal +6.1% = EUR 9,768.

What it buys, 2023 against 2025

Service share by category, 2025

No service-share measure for this market.

What drives it

- Grew most: Fuel System +149k, Maintenance Service +133k, Electrical +76k, Intake Exhaust Emission +58k.
- Fell most: Chassis Frame -3k.
- On parts bought in both years: +301k from quantity, +9k from price.
- 2,178 different part numbers in 2025; 17.4% of 2023-25 billing on 1088 part numbers no other market bought (e.g. pump asm; inj, control unit; eng, lining kit; frt brk).

What is specific here

- Wartime market. Nothing on file about pricing.

Why this recommendation, and what it does

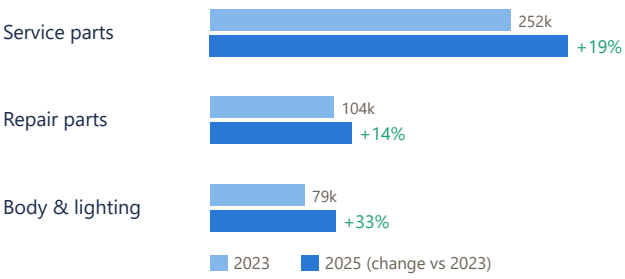

- no fleet figure; no service-share measure: the fleet is growing, so none of the hold rules applies.
- Today's proposal on this market: Service parts: EUR 779,682 billed, factory move +4.9%, proposal +4.9% = EUR 37,788; Repair parts: EUR 193,390 billed, factory move +6.4%, proposal +5.9% = EUR 11,479; Body & lighting: EUR 51,708 billed, factory move +5.9%, proposal +5.4% = EUR 2,796.

What it buys, 2023 against 2025

Service share by category, 2025

* More than the counted fleet should need: vehicles we do not count (imports, or a fleet figure that is too low) buy here. Not a real share.

What drives it

- Grew most: Accident & Body +36k, Brakes +29k, Maintenance Service +28k, Electrical +20k.
- Fell most: Transmission -3k, Tools Equipment -2k.
- On parts bought in both years: +62k from quantity, +9k from price.
- Genuine is 54% of the service parts it buys; the rest is BVP.
- 1,954 different part numbers in 2025 (0.85 per official vehicle); 3.7% of 2023-25 billing on 356 part numbers no other market bought (e.g. display; multi, filter asm;fuel, steering unit).

What is specific here

- 55% of all vehicle registrations January-July 2025 were used vehicles (17,144 of 31,200, Cyprus Statistical Service).
- Imported vehicles are not in our fleet count, so our service share here is overstated.

Why this recommendation, and what it does

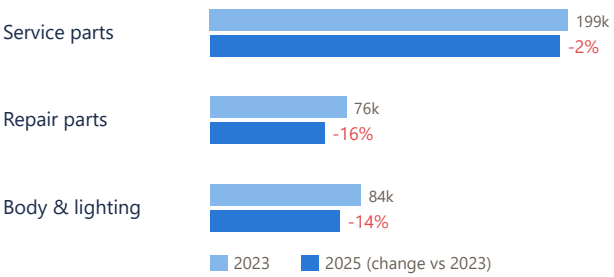

- vehicles outside our fleet count (imports) also buy here — shown by parts no other market buys and by service shares above what the counted fleet needs; keeping service parts where they are is how the distributor wins that work.
- Today's proposal on this market: Service parts: EUR 228,551 billed, factory move +5.5%, proposal +4.0% = EUR 9,070; Repair parts: EUR 99,784 billed, factory move +6.7%, proposal +6.1% = EUR 6,054; Body & lighting: EUR 79,605 billed, factory move +6.8%, proposal +6.3% = EUR 4,982.
- Holding service parts gives up EUR 9,070 here.
- Also: 35% of this market's euro goes through urgent orders billed at up to 107% of list — a terms question worth as much as the list price.

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Steering +21k, Brakes +15k, Intake Exhaust Emission +9k, Electrical +5k.
- Fell most: Driveline Axle -21k, Accident & Body -12k.
- On parts bought in both years: +7k from quantity, +4k from price.
- Genuine is 74% of the service parts it buys; the rest is BVP.
- 973 different part numbers in 2025 (0.26 per official vehicle); 0.4% of 2023-25 billing on 34 part numbers no other market bought (e.g. drive asm; final,rr, frame; cushion,frt seat, harness; cab).

What is specific here

- An aftermarket fuel filter sells at about 10% of the genuine price; the distributor mentioned up to about 30% discount for a brake special price (11 Aug 2026).

Why this recommendation, and what it does

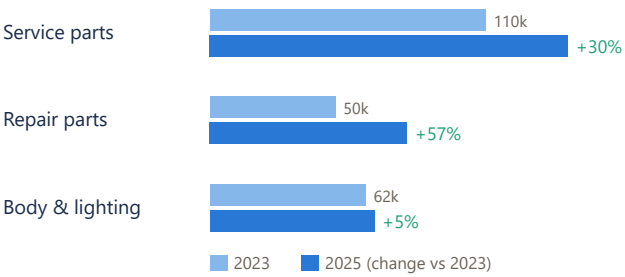

- ageing fleet (fleet -2% 2023-25 and -2% in the 2026 forecast) and weak service position (service share 19% (network 28%), +1.4 pts since 2023).
- documented price complaint on service parts, with service share 19% (network 28%), +1.4 pts since 2023.
- Today's proposal on this market: Service parts: EUR 183,020 billed, factory move +4.3%, proposal +2.9% = EUR 5,325; Repair parts: EUR 70,248 billed, factory move +6.9%, proposal +6.2% = EUR 4,359; Body & lighting: EUR 75,275 billed, factory move +6.3%, proposal +5.9% = EUR 4,416.
- Holding service parts gives up EUR 5,325 here.

What it buys, 2023 against 2025

Service share by category, 2025

What drives it

- Grew most: Fuel System +4k, Cabin Interior +3k, Intake Exhaust Emission +3k, Electrical +3k.
- Fell most: Suspension -2k, Wheels Hub -2k, Accident & Body -1k.
- On parts bought in both years: +5k from quantity, +1k from price.
- Genuine is 99% of the service parts it buys; the rest is BVP.
- 681 different part numbers in 2025 (1.68 per official vehicle); 0.7% of 2023-25 billing on 42 part numbers no other market bought (e.g. pan asm; oil, arm; lwr cont, motor asm; fan,blower unit).

What is specific here

- Brake pad share 22.2% against 29.5% for the network; asks a tailor-made price benchmarked on Bosch and Textar; air-freighted rush orders carry a 3% surcharge (25 Aug 2026).

Why this recommendation, and what it does

- a complaint is on file, but service share 30% (network 28%), +9.2 pts since 2023: answer it with BVP or a targeted special price, not the list.
- Today's proposal on this market: Service parts: EUR 41,551 billed, factory move +6.4%, proposal +4.9% = EUR 2,054; Repair parts: EUR 18,443 billed, factory move +7.0%, proposal +6.3% = EUR 1,165; Body & lighting: EUR 22,265 billed, factory move +6.7%, proposal +6.2% = EUR 1,369.
- Also: 100% of this market's euro goes through urgent orders billed at up to 103% of list — a terms question worth as much as the list price.

* How to read this, and what it does not rest on

- The price list stays one price per part: every part follows its own factory base-price change, scaled so the book lands on +5%, with the pad kits held. A 'hold' here is applied as a distributor condition on that part group, the way stock-order and customer conditions already differ today (Norway pays 95.6% of list on stock orders, Germany 99.8%, UTI 86.0%).
- Service parts = the fourteen maintenance categories (filters, brakes, clutch) plus parts flagged as maintenance; body & lighting = accident and body parts; repair = everything else.
- Rules behind 'hold' on service parts: imported vehicles we do not count; or dealers measurably reacted to the April 2026 rise; or the fleet is flat/shrinking and our service share is below the network or falling; or a documented price complaint on service parts together with a low or falling share.
- Fleet figures are the planning estimates behind the service-share measure; only the UK D-Max fleet is a locked count. Fleet age by market is not on file (only the UK truck fleet has registrations by year). Imported-vehicle numbers for Malta and Cyprus are for all vehicles, not Isuzu.
- Figures cover parts only: transport charges, rebates, credits and lubricants are left out.

Sources: SAP parts billing 2023–Aug 2026; the in-scope revision base behind the +5% proposal; dated PR00 price lists; the service-share measure by market and category; fleet planning estimates (July 2026, corrected 2026 column); sales-to-dealer files for the UK, Ireland and Portugal; distributor review minutes July–August 2026; IMIE monthly market packs (June/July 2026); pickup and pricing research notes (September 2026); Cyprus Statistical Service (registrations Jan–Jul 2025); Newsbook Malta, 4 March 2026 (used imports, from the Transport Minister). Indicative — a basis for decisions, not a price change.
